

pathsuris.sty: Paths and URIs for \TeX *

Jinbo Zhang, Michael Kohlhase, Dennis Müller
FAU Erlangen-Nürnberg

November 6, 2020

Abstract

This package provides macros to deal with paths and base URIs for \TeX . In particular, it offers a path canonicalizer, which is used in package `modules`, in order to support modules specified with relative path.

Contents

*Version v2.1 (last revised 2020/09/30)

1 User Interface

1.1 Base URIs

`\baseURI` `\baseURI`¹

1.2 Using Absolute Paths

Finally, the separation of documents into multiple modules often profits from a symbolic management of file paths. To simplify this, the `modules` package supplies the `\defpath` macro: `\defpath[<baseURI>]{<cname>}{<path>}` defines a command, so that `\<cname>{<name>}` expands to `<path>/<name>`. So we could have used

```
\defpath{OPaths}{../other}
\importmodule[load=\OPahts{bar}]{bar}
```

instead of the second line in Example ???. The variant `\OPaths` has the big advantage that we can get around the fact that \TeX/L\TeX does not set the current directory in `\input`, so that we can use systematically deployed `\defpath`-defined path macros to make modules relocatable by defining the path macros locally. The optional parameter *<baseURI>* is for the L^AT_EX_ML transformation, which (if *<baseURI>* is specified) resolves *<path>* to an absolute URI according to [BFM05, section 5.2].

1.3 Path Canonicalization

By calling `\@cpath{<path>}`, the canonicalized path will be stored in `\@CanPath`.
`\cpath` To print a canonicalized path, simply use `\cpath{<path>}`. Here is a set of examples with their canonizalized paths for testing.

path	canonicalized path	expected
aaa	aaa	aaa
.././aaa	.././aaa	.././aaa
aaa/bbb	aaa/bbb	aaa/bbb
aaa/..		
.././aaa/bbb	.././aaa/bbb	.././aaa/bbb
../aaa/./bbb	../bbb	../bbb
../aaa/bbb	../aaa/bbb	../aaa/bbb
aaa/bbb/./ddd	aaa/ddd	aaa/ddd
aaa/bbb/./ddd	aaa/bbb/ddd	aaa/bbb/ddd
./		
aaa/bbb/./../		

¹EDNOTE: document it

1.4 URIs

By calling `\seturi[\meta{macroname}]{\langle path \rangle}`, the URI will be split into its components `\macronamescheme`, `\macronameauthority`, `\macronamepath`, `\macronamequery` and `\macronamefragment`, and the resolved URI itself is stored in `\macronameuri`, as in the following example. If the optional `macroname` is not provided, the default name is `pathsuris@curruri@`.

In order to differentiate between empty and missing components, a missing component will be equal to `\makeuri@empty`, whose *expansion* is `\relax`.

```
\seturi[myuri]{http://this.isatest/foo/bar/?query#fragment}
```

	macro	value
yields:	<code>\myuriuri</code>	http://this.isatest/foo/bar?query#fragment
	<code>\myurischeme</code>	http
	<code>\myuriauthority</code>	this.isatest
	<code>\myuripath</code>	foo/bar
	<code>\myuriquery</code>	query
	<code>\myurifragment</code>	fragment

`\makeuri{\meta{scheme}}{\meta{authority}}{\meta{path}}{\meta{query}}{\meta{fragment}}` constructs a URI from its individual components. The (expanded and resolved) individual components will be stored in `\makeuri@scheme`, `\makeuri@authority`, etc.; the resolved URI will be stored in `\makeuri@uri`.

`\asuri{\meta{macroname}}{\meta{uri}}`, similarly to `setpath`, defines a new macro `\macroname[\meta{newmacroname}]{\meta{command}}` that allows manipulating `uri` in various ways. `\asuri` calls `\seturi[\meta{macroname}]{\meta{uri}}`, so the individual components and full `uri` (as string) are subsequently stored in `\macronamescheme`, `\macronameauthority`, etc.

If an optional new macro name is given in `\macroname`, then the result of the modification is stored in that new macro, as if defined via `\asuri`; otherwise, the macro is modified “in place”.

- `\macroname{drop query}` drops the query component.
- `\macroname{drop fragment}` drops the fragment component.
- `\macroname{/other/path}` drops query and fragment, appends `other/path` to the path and resolves the URI.
- `\macroname{?newquery}` drops the fragment and either declares `newquery` as a new query component, or appends `?newquery` to the existing query component, if it is not `\makeuri@empty`. Note, that this behaviour diverges from the official URI specification, but it conforms to MMT URI’s, which use `?` as separator between `DPaths`, modules names and declaration names.
- `\macroname{#newfragment}` analogously to `{?newquery}`.

2 The Implementation

```

1 <*package>
2 \RequirePackage{stex-base}
3 \RequirePackage{xstring}
4 \RequirePackage{etoolbox}

```

2.1 Base URIs

`\baseURI` On the L^AT_EX side we do nothing (for the moment).

```

5 \newcommand\baseURI[2] [] {}

```

2.2 Using Absolute Paths

`\defpath` `\defpath[optional argument]{macro name}{base path}` defines a new macro which can take another path to form one integrated path. For example, `\MathHub` in every `localpaths.tex` is defined as:

```

\defpath{MathHub}{/path/to/localmh/MathHub}

```

then we can use `\MathHub` to form other paths, for example,

```

\MathHub{source/smgglom/sets}

```

will generate `/path/to/localmh/MathHub/source/smgglom/sets`.

```

6 \newrobustcmd\defpath[3] [] {%
7   \expandafter\newcommand\csname #2\endcsname[1] {#3/##1}%
8 }%

```

2.3 Path Canonicalization

We define two macros for changing the category codes of common characters in URIs, in particular `#`.

```

9 \def\pathsuris@setcatcodes{%
10   \edef\pathsuris@oldcatcode@hash{\the\catcode'\#}%
11   \catcode'\#=12\relax%
12   \edef\pathsuris@oldcatcode@slash{\the\catcode'\}%
13   \catcode'\/=12\relax%
14   \edef\pathsuris@oldcatcode@colon{\the\catcode'\:%}
15   \catcode'\:=12\relax%
16   \edef\pathsuris@oldcatcode@qm{\the\catcode'\?}%
17   \catcode'\?=12\relax%
18 }
19 \def\pathsuris@resetcatcodes{%
20   \catcode'\#\pathsuris@oldcatcode@hash\relax%
21   \catcode'\/>\pathsuris@oldcatcode@slash\relax%
22   \catcode'\:\pathsuris@oldcatcode@colon\relax%
23   \catcode'\?\pathsuris@oldcatcode@qm\relax%
24 }

```

We define some macros for later comparison.

```

25 \def\@ToTop{..}
26 \def\@Slash{/}
27 \def\@Colon{:}
28 \def\@QuestionMark{?}
29 \def\@Dot{.}
30
31 \pathsuris@setcatcodes
32 \def\@Fragment{#}
33 \pathsuris@resetcatcodes

```

Implement \@cpath.

\@cpath

```

34 \def\@cpath#1{%
35   \edef\pathsuris@cpath@temp{#1}%
36   \def\@CanPath{}%
37   \IfBeginWith\pathsuris@cpath@temp\@Slash{%
38     \@cpath@loop%
39     \edef\@CanPath{\@Slash\@CanPath}%
40   }{%
41     \IfBeginWith\pathsuris@cpath@temp{\@Dot\@Slash}{%
42       \StrGobbleLeft\pathsuris@cpath@temp2[\pathsuris@cpath@temp]%
43       \@cpath@loop%
44     }{%
45       \ifx\pathsuris@cpath@temp\@Dot\else%
46         \@cpath@loop\fi%
47     }%
48   }%
49   \IfEndWith\@CanPath\@Slash{%
50     \ifx\@CanPath\@Slash\else%
51       \StrGobbleRight\@CanPath1[\@CanPath]%
52     \fi%
53   }{}%
54 }
55
56 \def\@cpath@loop{%
57   \IfSubStr\pathsuris@cpath@temp\@Slash{%
58     \StrCut\pathsuris@cpath@temp\@Slash\pathsuris@cpath@temp@a\pathsuris@cpath@temp%
59     \ifx\pathsuris@cpath@temp@a\@ToTop%
60       \ifx\@CanPath\empty%
61         \edef\@CanPath{\@ToTop}%
62       \else%
63         \edef\@CanPath{\@CanPath\@Slash\@ToTop}%
64       \fi%
65       \@cpath@loop%
66     \else%
67       \ifx\pathsuris@cpath@temp@a\@Dot%
68         \@cpath@loop%
69       \else%

```

```

70      \IfBeginWith\pathsuris@cpath@temp\@ToTop{%
71          \StrBehind{\pathsuris@cpath@temp}{\@ToTop}[\pathsuris@cpath@temp]%
72          \IfBeginWith\pathsuris@cpath@temp\@Slash{%
73              \edef\pathsuris@cpath@temp{\@CanPath\pathsuris@cpath@temp}%
74          }{%
75              \ifx\@CanPath\@empty\else%
76                  \edef\pathsuris@cpath@temp{\@CanPath\@Slash\pathsuris@cpath@temp}
77              \fi%
78          }%
79          \def\@CanPath{}%
80          \@cpath@loop%
81      }{%
82          \ifx\@CanPath\@empty%
83              \edef\@CanPath{\pathsuris@cpath@temp@a}%
84          \else%
85              \edef\@CanPath{\@CanPath\@Slash\pathsuris@cpath@temp@a}%
86          \fi%
87          \@cpath@loop
88      }%
89      \fi\fi%
90  }{
91      \ifx\@CanPath\@empty%
92          \edef\@CanPath{\pathsuris@cpath@temp}%
93      \else%
94          \edef\@CanPath{\@CanPath\@Slash\pathsuris@cpath@temp}%
95      \fi%
96  }%
97 }

```

Implement `\cpath` to print the canonicalized path.

`\cpath`

```

98 \newcommand\cpath[1]{%
99     \@cpath{#1}%
100     \@CanPath%
101 }

```

2.4 URIs

Various macros for dealing with URIs. To deal with empty URI components (scheme, authority, etc.), we use `\relax` to signify a non-existent component as opposed to an empty one.

```

102 \def\makeuri@setempty#1{\def#1{\relax}}
103 \def\makeuri@empty{\relax}
104 \def\makeuri@test#1{%
105     \ifx#1\makeuri@empty\else#1\fi%
106 }

```

`\makeuri` `\makeuri` constructs a URI from scheme, authority, path, query and fragment separately.

```

107 \def\makeuri@uri{}
108 \def\makeuri#1#2#3#4#5{
109     \edef\makeuri@scheme{#1}
110     \edef\makeuri@authority{#2}
111     \edef\makeuri@path{#3}
112     \ifx\makeuri@path\makeuri@empty\else
113         \@cpath{#3}
114         \edef\makeuri@path{\@CanPath}
115     \fi
116     \edef\makeuri@query{#4}
117     \edef\makeuri@fragment{#5}
118     \ifx\makeuri@scheme\makeuri@empty\else
119         \edef\makeuri@scheme{\makeuri@scheme\@Colon}
120     \fi
121     \ifx\makeuri@authority\makeuri@empty\else
122         \edef\makeuri@authority{\@Slash\@Slash\makeuri@authority}
123         \ifx\makeuri@path\makeuri@empty\else
124             \IfBeginWith\makeuri@path\@Slash{{
125                 \edef\makeuri@path{\@Slash\makeuri@path}
126             }}
127         \fi
128     \fi
129     \ifx\makeuri@query\makeuri@empty\else
130         \edef\makeuri@query{\@QuestionMark\makeuri@query}
131     \fi
132     \ifx\makeuri@fragment\makeuri@empty\else

```

Change History

v1.0

General: First Version with
Documentation 1

v1.1

General: adding `\baseURI` from
`omdoc.sty` and `\defpath` from
`modules.sty` 1
