Abstract

The `omdoc` package is part of the `STEX` collection, a version of `TEX/LATEX` that allows to markup `TEX/LATEX` documents semantically without leaving the document format, essentially turning `TEX/LATEX` into a document format for mathematical knowledge management (MKM).

This package supplies an infrastructure for writing OMDoc glossary entries.

1 Introduction

2 The User Interface

2.1 Package and Class Options

`smglom.cls` accepts all options of the `omdoc.cls` and `article.cls` and just passes them on to these.¹

EdN:1

¹EdNOTE: describe them

3 Implementation: The OMDoc Class

3.1 Class Options

To initialize the `omdoc` class, we declare and process the necessary options.

```
1 <*cls>
2 \DeclareOption{showmeta}{\PassOptionsToPackage{\CurrentOption}{metakeys}}
3 \ProcessOptions
4 </cls>
5 <*ltxml.cls | ltxml.sty>
6 # -*- CPERL -*-
7 package LaTeXML::Package::Pool;
8 use strict;
9 use LaTeXML::Package;
10 ProcessOptions();
11 </ltxml.cls | ltxml.sty>
```

We load `omdoc.cls`, and the desired packages. For the \LaTeX ML bindings, we make sure the right packages are loaded.

```
12 <*cls>
13 \LoadClass{omdoc}
14 \RequirePackage{amstext}
15 \RequirePackage{modules}
16 \RequirePackage{dcm}
17 \RequirePackage{statements}
18 \RequirePackage{sproof}
19 \RequirePackage{cmath}
20 \RequirePackage{presentation}
21 \RequirePackage{amsfonts}
22 \RequirePackage[english,ngerman]{babel}
23 \RequirePackage{smglom}
24 </cls>
25 <*ltxml.cls>
26 LoadClass('omdoc');
27 RequirePackage('amstext');
28 RequirePackage('modules');
29 RequirePackage('dcm');
30 RequirePackage('statements');
31 RequirePackage('cmath');
32 RequirePackage('presentation');
33 RequirePackage('amsfonts');
34 RequirePackage('babel',options=>['english','ngerman']);
35 RequirePackage('smglom');
36 </ltxml.cls>
```

3.2 Input

`ginput` iterates over the language bindings.

```

37 <ltxml.sty>RawTeX(
38 <*sty | ltxml.sty>
39 \newcommand\ginput[2] [] {\input{#2}\@for\@I:=#1\do{\input{#2.\@I}}}
```

3.3 For Module Definitions

```

gimport just a shortcut
40 \newcommand\gimport[2] [] {\def\@test{#1}%
41 \edef\mh@@repos{\mh@currentrepos}%
42 \ifx\@test\@empty\importmhmodule[\mh@@repos]{#2}{#2}%

guse just a shortcut

gview The gview environment is just a layer over the view environment with the keys
suitably adapted.

`symbol` has a starred form for primary symbols. Both do nothing.

3.4 For Language Bindings

`gle` The `gle` environment is just a layer over the `module` environment with the keys and language suitably adapted.

```

90 <ltxml.sty>RawTeX(
91 <*sty | ltxml.sty>
92 \def\@en{en}\def\@de{de}
93 \newenvironment{gle}[3][]{\def\@test{#1}%

95 \edef\mh@crepos{\mh@currentrepos}%
96 \gimport[\mh@crepos]{#2}\def\@test{#3}%
97 \ifx\@test\@en\selectlanguage{english}\fi
98 \ifx\@test\@de\selectlanguage{ngerman}\fi
99 {\end{module}}}
100 </sty | ltxml.sty>
101 <ltxml.sty>');

```

noun

```
102 <*cls>
