April 19, 2014

Abstract

The **smglom** package is part of the **S_TE_X** collection, a version of **T_EX/L^AT_EX** that allows to markup **T_EX/L^AT_EX** documents semantically without leaving the document format, essentially turning **T_EX/L^AT_EX** into a document format for mathematical knowledge management (MKM).

This package supplies an infrastructure for writing OMDoc glossary entries.

1 Introduction

2 The User Interface

2.1 Package and Class Options

`smglom.cls` accepts all options of the `omdoc.cls` and `article.cls` and just passes them on to these.

3 Implementation: The SMGloM Class

3.1 Class Options

To initialize the `smglom` class, we pass on all options to `omdoc.cls`

```
1 <*cls>
2 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{omdoc}}
3 \ProcessOptions
4 </cls>
5 <*ltxml.cls | ltxml.sty>
6 # -*- CPERL -*-
7 package LaTeXML::Package::Pool;
8 use strict;
9 use LaTeXML::Package;
10 DeclareOption(undef,sub {PassOptions('article','cls',ToString(Digest(T_CS('\CurrentOption'))));
11 ProcessOptions();
12 </ltxml.cls | ltxml.sty>
```

We load `omdoc.cls`, and the desired packages. For the \LaTeX ML bindings, we make sure the right packages are loaded.

```
13 <*cls>
14 \LoadClass{omdoc}
15 \RequirePackage{amstext}
16 \RequirePackage{modules}
17 \RequirePackage{dcm}
18 \RequirePackage{statements}
19 \RequirePackage{sproof}
20 \RequirePackage{cmath}
21 \RequirePackage{presentation}
22 \RequirePackage{amsfonts}
23 \RequirePackage{smglom}
24 </cls>
25 <*ltxml.cls>
26 LoadClass('omdoc');
27 RequirePackage('amstext');
28 RequirePackage('modules');
29 RequirePackage('dcm');
30 RequirePackage('statements');
31 RequirePackage('cmath');
32 RequirePackage('presentation');
33 RequirePackage('amsfonts');
34 RequirePackage('smglom');
35 </ltxml.cls>
```

3.2 Input

`ginput` iterates over the language bindings.

```
36 <ltxml.sty>RawTeX(
37 <*sty | ltxml.sty>
```

```
38 \newcommand\ginput[2] [] {\input{#2}\@for\@I:=#1\do{\input{#2.\@I}}}
```

3.3 For Module Definitions

gimport just a shortcut

```
39 \newcommand\gimport[2] [] {\def\@test{#1}%
40 \edef\mh@crepos{\mh@currentrepos}%
41 \ifx\@test\@empty\importmhmodule[\mh@crepos]{#2}{#2}%
42 \else\importmhmodule[#1]{#2}{#2}\fi}
```

guse just a shortcut

```
43 \newcommand\guse[2] [] {\def\@test{#1}%
44 \edef\mh@crepos{\mh@currentrepos}%
45 \ifx\@test\@empty\usemhmodule[\mh@crepos]{#2}{#2}%
46 \else\usemhmodule[#1]{#2}{#2}\fi}
```

gadopt just a shortcut

```
47 \newcommand\gadopt[2] [] {\def\@test{#1}%
48 \edef\mh@crepos{\mh@currentrepos}%
49 \ifx\@test\@empty\adoptmhmodule[\mh@crepos]{#2}{#2}%
50 \else\adoptmhmodule[#1]{#2}{#2}\fi}
```

gview The **gview** environment is just a layer over the **view** environment with the keys suitably adapted.

```
51 \newenvironment{gview}[3] [] {\def\@test{#1}%
52 \ifx\@test\@empty%
53 \begin{view}[from=#2,to=#3]{#2}{#3}\else%
54 \begin{view}[from=#2,to=#3,#1]{#2}{#3}\fi}
55 {\end{view}}
```

symbol has a starred form for primary symbols. Both do nothing.

```
56 <sty>
57 \def\symbol{\@ifstar\@gobble\@gobble}
58 </sty>
59 <ltxml.sty>
60 DefConstructor('\symbol OptionalMatch:* {}',
61 " <omdoc:symbol ?#1(role='primary')(role='secondary') name='#2'/>");
62 </ltxml.sty>
```

***nym**

```
63 <cls>
64 \newcommand\hypernym[3] [] {#2 is a hypernym of #3}
65 \newcommand\hyponym[3] [] {#2 is a hyponym of #3}
66 \newcommand\meronym[3] [] {#2 is a meronym of #3}
67 </cls>
68 <ltxml.cls>
69 DefConstructor('\hypernym [] {}{}', "");
70 DefConstructor('\hyponym [] {}{}', "");
```

```

71 DefConstructor('meronym [] {}', "");
72 </ltxml.cls>

```

EdN:1

\MSC to define the Math Subject Classification, ¹

```

73 <*cls>
74 \newcommand\MSC{\@gobble}
75 </cls>
76 <*ltxml.cls>
77 DefConstructor('MSC{}', "");
78 </ltxml.cls>

```

3.4 For Language Bindings

gle The **gle** environment is just a layer over the **module** environment with the keys and language suitably adapted.

```

79 \newenvironment{gle}[3] [] {\def\@test{#1}%
80 \ifx\@test\@empty\begin{module}[id=#2.#3]\else\begin{module}[id=#2.#3,#1]\fi%
81 \edef\mh{@repos{\mh@currentrepos}%
82 \gimport[\mh@repos]{#2}%
83 \smg@select@language{#3}}
84 {\end{module}}

```

gviewsketch The **gviewsketch** environment is just a layer over the **viewsketch** environment with the keys suitably adapted.

```

85 \newenvironment{gviewsketch}[3] [] {\def\@test{#1}%
86 \ifx\@test\@empty%
87 \begin{viewsketch}[from=#2,to=#3]{#2}{#3}\else%
88 \begin{viewsketch}[from=#2,to=#3,#1]{#2}{#3}\fi}
89 {\end{viewsketch}}

```

gve The **gve** environment is just a layer over the **gviewsketch** environment with the keys and language suitably adapted.

```

90 \newenvironment{gve}[5] [] {\def\@test{#1}%
91 \ifx\@test\@empty%
92 \begin{gviewsketch}[id=#2.#3]{#4}{#5}\else%
93 \begin{gviewsketch}[id=#2.#3,#1]{#4}{#5}\fi
94 \smg@select@language{#3}}
95 {\end{gviewsketch}}
96 </sty | ltxml.sty>
97 <ltxml.sty>');

```

noun

```

98 <*cls>
99 \newcommand\noun[2] {}
100 </cls>
101 <*ltxml.cls>

```

¹EDNOTE: MK: what to do for the LaTeXML side?

```
102 DefMacro('\noun {}{}','');
103 </ltxml.cls>
```

qualifier

```
104 <*cls>
105 \newcommand\qualifier[3]{}
106 </cls>
107 <*ltxml.cls>
108 DefMacro('\qualifier {}{}{}','');
109 </ltxml.cls>
```
