# Requirements for Semantic Requirements Documents

Michael Kohlhase   John Doe

November 17, 2012

*07.02.08*      – *Version:* 1.0 –      *Contributor:*  
made initiale version 1.0 (empty skeleton file)

*07.03.08*      – *Version:* 1.1 –      *Contributor:*  
added two requirements

*12.05.08*      – *Version:* 1.2 –      *Contributor:*  
simplified some formulations

*17.05.08*      – *Version:* 1.3 –      *Contributor:*  
added third requirement that depends on the first two.

## Certification

*12.02.08*      – *Version:* 1.1 –      *Certifier:*  
*New State:* **needs work**  
some formulations still unclear, but correct in principle

*15.05.08*      – *Version:* 1.2 –      *Certifier:*  
*New State:* **at DFKI**  
may need another requirement.

*19.02.08*      – *Version:* 1.3 –      *Certifier:*  
*New State:* **at DFKI**  
certified: this is what DFKI wants.

# 1 Introduction

In this document we show how to use the `reqdoc` package, unfortunately, the requirements themselves are quite phony, since they are only for introductory purposes.

## 2 Some Requirements

**U1:** (Priority: 2) Accept [data](#) from heterogeneous [data sources](#)

Note: in particular:  $DATA^{tm}$

**U2:** (Priority: 1) do something with the data to test the reference

Note: not really, this is just a test

**U3:** (Priority: 1) do something with the data to test the reference

Note: not really, this is just a test [from [1,2](#)]

## 3 Requirements as tables

We can also format requirements as tables

#	Prio	Requirement	Notes	Refs
<b>U1</b>	2	Accept <a href="#">data</a> from heterogeneous <a href="#">data sources</a>	in particular: $DATA^{tm}$	
<b>U2</b>	1	do something with the data to test the reference do something with the data to test the reference	not really, this is just a test	
<b>U3</b>	1	do something with the data to test the reference	not really, this is just a test	<a href="#">1,2</a>

## 4 Conclusion

See, it was quite simple
