Setting up Semantic References

In a nutshell: How to set up semantic references? Easy, just use the `omgroup` environment from the `omdoc` package.

Testing the References

Now, we test the referencing mechanism

Internal Referencing: First single references: ?scr@setup? and ?scr@testing?,
and then compound ones: ?scr@setup? and ?scr@testing?

External Referencing: First single references: [IDC, ??] and [IDC, ??]
