Abstract

The `omdoc` package is part of the \LaTeX collection, a version of $\text{\TeX}/\text{\LaTeX}$ that allows to markup $\text{\TeX}/\text{\LaTeX}$ documents semantically without leaving the document format, essentially turning $\text{\TeX}/\text{\LaTeX}$ into a document format for mathematical knowledge management (MKM).

This package supplies an infrastructure for writing OMDoc glossary entries.

1 Introduction

2 The User Interface

2.1 Package and Class Options

`smglom.cls` accepts all options of the `omdoc.cls` and `article.cls` and just passes them on to these.¹

EdN:1

¹EdNOTE: describe them

3 Implementation: The OMDoc Class

3.1 Class Options

To initialize the `omdoc` class, we declare and process the necessary options.

```
1 <*cls>
2 \DeclareOption{showmeta}{\PassOptionsToPackage{\CurrentOption}{metakeys}}
3 \ProcessOptions
4 </cls>
5 <*ltxml.cls>
6 # -*- CPERL -*-
7 package LaTeXML::Package::Pool;
8 use strict;
9 use LaTeXML::Package;
10 ProcessOptions();
11 </ltxml.cls>
```

We load `omdoc.cls`, and the desired packages. For the \LaTeX ML bindings, we make sure the right packages are loaded.

```
12 <*cls>
13 \LoadClass{omdoc}
14 \RequirePackage{amstext}
15 \RequirePackage{modules}
16 \RequirePackage{statements}
17 \RequirePackage{sproof}
18 \RequirePackage{cmath}
19 \RequirePackage{presentation}
20 \RequirePackage{amsfonts}
21 \RequirePackage[english,ngerman]{babel}
22 </cls>
23 <*ltxml.cls>
24 LoadClass('omdoc');
25 RequirePackage('amstext');
26 RequirePackage('modules');
27 RequirePackage('statements');
28 RequirePackage('cmath');
29 RequirePackage('presentation');
30 RequirePackage('amsfonts');
31 RequirePackage('babel',options=>['english','ngerman']);
32 RequirePackage('smglom');
33 </ltxml.cls>
```

3.2 Input

`ginput` iterates over the language bindings.

```
34 <ltxml.sty>RawTeX(
35 <*sty | ltxml.sty>
36 \newcommand\ginput[2][\input{#2}\for\@I:=#1\do{\input{#2.\@I}}}
```

3.3 For Module Definitions

gimport just a shortcut

```

37 \newcommand\gimport[2] [] {\def\@test{#1}%
38 \ifx\@test\@empty\importmhmodule[smglom/smglom]{#2}{#2}%
39 \else\importmhmodule[smglom/#1]{#2}{#2}\fi}

```

guse just a shortcut

```

40 \newcommand\guse[2] [] {\def\@test{#1}%
41 \ifx\@test\@empty\usemhmodule[smglom/smglom]{#2}{#2}%
42 \else\usemhmodule[smglom/#1]{#2}{#2}\fi}

```

gadopt just a shortcut

```

43 \newcommand\gadopt[2] [] {\def\@test{#1}%
44 \ifx\@test\@empty\adoptmhmodule[smglom/smglom]{#2}{#2}%
45 \else\adoptmhmodule[smglom/#1]{#2}{#2}\fi}

gview The **gview** environment is just a layer over the **view** environment with the keys suitably adapted.

```

```

gviewsketch The **gviewsketch** environment is just a layer over the **viewsketch** environment with the keys suitably adapted.

```

49 \newenvironment{gviewsketch}[3] []%
50 {\def\@test{#1}\ifx\@test\@empty\begin{viewsketch}[from=#2,to=#3]{#2}{#3}\else\begin{viewsketch

3.4 For Language Bindings

gle The gle environment is just a layer over the module environment with the keys and language suitably adapted.
