omtext: Semantic Markup for Mathematical Text Fragments in LATEX*

Michael Kohlhase Jacobs University, Bremen http://kwarc.info/kohlhase

January 19, 2016

Abstract

The omtext package is part of the STEX collection, a version of TEX/LATEX that allows to markup TEX/LATEX documents semantically without leaving the document format, essentially turning TEX/LATEX into a document format for mathematical knowledge management (MKM).

This package supplies an infrastructure for writing OMDoc text fragments in \LaTeX

Introduction 1

The omtext package supplies macros and environment that allow to mark up mathematical texts in STFX, a version of TFX/LATFX that allows to markup TFX/LATFX documents semantically without leaving the document format, essentially turning TFX/IATFX into a document format for mathematical knowledge management (MKM). The package supports direct translation to the OMDoc format [Koh06]

2 The User Interface

2.1Package Options

showmeta

The omtext package takes a single option: showmeta. If this is set, then the metadata keys are shown (see [Koh15a] for details and customization options).

The omtext environment is used for any text fragment that has a contribution to a

2.2Mathematical Text

text that needs to be marked up. It can have a title, which can be specified via the title key. Often it is also helpful to annotate the type key. The standard relations from rhetorical structure theory abstract, introduction, conclusion, thesis, comment, antithesis, elaboration, motivation, evidence, transition, note,

type=

title=

annote are recommended as values. Note that some of them are unary relations like introduction, which calls for a target. In this case, a target using the for key should be specified. The transition relation is special in that it is binary (a "transition between two statements"), so additionally, a source should be specified

from=

using the from key.

display=

Note that the values of the title and type keys are often displayed in the text. This can be turned off by setting the display key to the value flow. Sometimes we want to specify that a text is a continuation of another, this can be done by giving the identifier of this in the continues key.

continues=

functions=

theory=

verbalizes=

EdN:1

EdN:2

Finally, there is a set of keys that pertain to the mathematical formulae in the text. The functions key allows to specify a list of identifiers that are to be interpreted as functions in the generate content markup. The theory specifies a module (see [KGA15a]) that is to be pre-loaded in this one Finally, verbalizes specifies a (more) formal statement (see [Koh15b]) that this text verbalizes or paraphrases.²

2.3Phrase-Level Markup

\phrase verbalizes= The phrase macro allows to mark up phrases with semantic information. It takes an optional KeyVal argument with the keys verbalizes and type as above and style, class, index that are disregarded in the LATEX, but copied into the gen-

type= style

¹EdNote: this is not implemented yet.

²EdNote: MK:specify the form of the reference.

class index

erated content markup.

\nlex

We use the $\nex{\langle phrase \rangle}$ for marking up phrases that serve as natural language examples and $\nex{\langle phrase \rangle}$ for counter-examples (utterances that are not acceptable for some reason). In natural language examples, we sometimes use "co-reference markers" to specify the resolution of anaphora and the like. We use the $\coreft{\langle phrase \rangle}{\langle mark \rangle}$ to mark up the "target" of a co-reference and analogously \corefs for coreference source – e.g. for an anaphoric reference. The usage is the following:

\coreft \corefs

is formatted to

If a farmer¹ owns a donkey², he₂ beats it₂.

\sinlinequote

The sinlinequote macro allows to mark up quotes inline and attribute them. The quote itself is given as the argument, possibly preceded by the a specification of the source in a an optional argument. For instance, we would quote Hamlet with

\sinlinequote[Hamlet, \cite{Shak:1603:Hamlet}]{To be or not to be}

\@sinlinequote

which would appear as "To be or not to be" Hamlet, (Shakespeare 1603) in the text. The style in which inline quotations appear in the text can be adapted by specializing the macros \@sinlinequote — for quotations without source and \@@sinlinequote — for quotations with source.

2.4 Block-Level Markup

sblockquote

\begin@sblockquote \end@@sblockquote

The sblockquote environment is the big brother of the \sinlinequote macro. It also takes an optional argument to specify the source. Here the four internal macros \begin@sblockquote to \end@@sblockquote are used for styling and can be adapted by package integrators. Here a quote of Hamlet would marked up as

```
\begin{sblockquote}[Hamlet, \cite{Shak:1603:Hamlet}]\obeylines
To be, or not to be: that is the question:
  Whether 'tis nobler in the mind to suffer
\end{sblockquote}
```

and would render as

To be, or not to be: that is the question: Whether 'tis nobler in the mind to suffer

Hamlet, (Shakespeare 1603)

\lec

The \lec macro takes one argument and sets it as a comment at the end of the line, making sure that if the content is too long it is pushed into a new line. We use it internally for placing the of source of the sblockquote environment above. The actual appearance of the line end comment is determined by the \@@lec macro, which can be customized in the document class.

\@@lec

2.5 **Index Markup**

The omtext package provides some extensions for the well-known indexing macros of IATEX. The main reason for introducing these macros is that index markup in OMDoc wraps the indexed terms rather than just marking the spot for cross-referencing. Furthermore the index commands only indexes words unless thenoindex option is set in the \usepackage. The omtext package and class make the usual \index macro undefined³.

noindex

\indextoo

EdN:3

\indexalt

\twintoo

The \indextoo macro renders a word and marks it for the index. Sometimes, we want to index a slightly different form of the word, e.g. for nonstandard plurals: while \indextoo{word}s works fine, we cannot use this for the word "datum", which has the plural "data". For this we have the macro \indexalt, which takes another argument for the displayed text, allowing us to use \indexalt{data}{datum}, which prints "data" but puts "datum" into the index.

The second set of macros adds an infrastructure for two-word compounds. Take for instance the compound "OMDoc document", which we usually want to add into the index under "OMDoc" and "document". \twintoo{OMDoc}{document} is a variant of \indextoo that will do just this. Again, we have a version that prints a variant: This is useful for situations like this the one in Figure 1:

We call group \twinalt{Abelian}{Abelian}{group}, iff \ldots

will result in the following

We call group Abelian, iff ...

and put "Abelian Group" into the index.

Example 1: Index markup

\atwintoo

The third set of macros does the same for two-word compounds with adjectives, "wonderful OMDoc document". \atwin{wonderful}{OMdoc}{document} will make the necessary index entries under "wonderful" and "document". Again, we have a variant \atwinalt whose first argument is the alternative text.

\atwinalt

All index macros take an optional first argument that is used for ordering the respective entries in the index.

³EDNOTE: implement this and issue the respective error message

3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the STEX GitHub repository [sTeX].

1. none reported yet

Implementation

Package Options 4.1

EdN:4

We declare some switches which will modify the behavior according to the package options. Generally, an option xxx will just set the appropriate switches to true (otherwise they stay false).⁴

```
1 (*package)
2 \newif\if@omtext@mh@\@omtext@mh@false
3 \DeclareOption{mh}{\@omtext@mh@true
4 \PassOptionsToPackage{\CurrentOption}{modules}}
5 \newif\ifindex\indextrue
6 \DeclareOption{noindex}{\indexfalse}
7 \DeclareOption*{\PassOptionsToPackage{\CurrentOption}{modules}}
8 \ProcessOptions
9 \ifindex\makeindex\fi
10 \if@omtext@mh@\RequirePackage{omtext-mh}\fi
11 \RequirePackage{xspace}
12 \RequirePackage{modules}
13 \RequirePackage{comment}
14 \RequirePackage{mdframed}
15 \RequirePackage{latexsym}
```

4.2 Mathematical Text

We define the actions that are undertaken, when the keys are encountered. The first set just records metadata; this is very simple via the \addmetakey infrastructure [Koh15a]. Note that we allow math in the title field, so we do not declare it to be Semiverbatim (indeed not at all, which allows it by default).

```
16 \srefaddidkey{omtext}
17 \addmetakey[] {omtext} {functions}
18 \addmetakey*{omtext}{display}
19 \addmetakey{omtext}{for}
20 \addmetakey{omtext}{from}
21 \addmetakey{omtext}{type}
22 \addmetakey*{omtext}{title}
23 \addmetakey*{omtext}{start}
24 \addmetakey{omtext}{theory}
25 \addmetakey{omtext}{continues}
26 \addmetakey{omtext}{verbalizes}
27 \addmetakey{omtext}{subject}
The next keys handle module loading (see [KGA15b]).
```

 $^{28\,\%}$ \ednote{MK: need to implement these in LaTeXML, I wonder whether there is a general

^{29 %} mechanism like numberit.}\ednote{MK: this needs to be rethought in the light of

^{30 % |\}usemodule|. It is probably obsolete. Is this used? Is this documented?}

⁴EdNote: need an implementation for LATEXML

```
31 \define@key{omtext}{require}{\requiremodules{#1}{sms}}
          32 \define@key{omtext}{module}{\message{module: #1}\importmodule{#1}\def\omtext@theory{#1}}
\st@flow We define this macro, so that we can test whether the display key has the value
          33 \def\st@flow{flow}
             We define a switch that allows us to see whether we are inside an omtext
          environment or a statement. It will be used to give better error messages for
          inline statements.
          34 \newif\if@in@omtext\@in@omtextfalse
  omtext The omtext environment is different, it does not have a keyword that marks it.
          Instead, it can have a title, which is used in a similar way. We redefine the \lec
          macro so the trailing \par does not get into the way.
          35 \def\omtext@pre@skip{\smallskip}
          36 \def\omtext@post@skip{}
          37 \providecommand{\stDMemph}[1]{\textbf{#1}}

              We set up a special treatment for including graphics to respect the intended OM-
              Doc document structure. The main work is done in the transformation stylesheet
              though.
              81 \newcommand\mygraphics[2][]{\includegraphics[#1]{#2}}
              82 \newcommand\mycgraphics[2][]{\begin{center}\mygraphics[#1]{#2}\end{center}}
              83 \newcommand\mybgraphics[2][]{\fbox{\mygraphics[#1]{#2}}}
```

84 \newcommand\mycbgraphics[2][]{\begin{center}\fbox{\mygraphics[#1]{#2}}\end{center}}

4.5 Index Markup

EdN:5

\omdoc@index this is the main internal indexing command. It makes sure that the modules necessary for interpreting the math in the index entries are loaded. If the loadmodules key is given, we import the module we are in otherwise all the currently imported modules. We do not have to require the module files, since the index is a the end of the document. If the at key is given, then we use that for sorting in the index. 85 \addmetakey{omdoc@index}{at} 86 \addmetakey[false] {omdoc@index}{loadmodules}[true] 87 \newcommand\omdoc@index[2][]{\ifindex% 88 \metasetkeys{omdoc@index}{#1}% 89 \@bsphack\begingroup\@sanitize% 90 \ifx\omdoc@index@loadmodules\@true% 91 \protected@write\@indexfile{}{\string\indexentry% 92 {\ifx\omdoc@index@at\@empty\else\omdoc@index@at @\fi% 93 {\string\importmodules{\@ifundefined{mod@id}\imported@modules\mod@id}% 94 #2}}{\thepage}}% 95 \else% 96 \protected@write\@indexfile{}{\string\indexentry% 97 {\ifx\omdoc@index@at\@empty\else\omdoc@index@at @\fi#2}{\thepage}}% $98 \fi$ % loadmodules 99 \endgroup\@esphack\fi}%ifindex Now, we make two interface macros that make use of this: \indexalt 100 \newcommand\indexalt[3][]{{#2}\omdoc@index[#1]{#3}} % word in text and index \indextoo 101 \newcommand\indextoo[2][]{{#2}\omdoc@index[#1]{#2}} % word in text and index \@twin this puts two-compound words into the index in various permutations 102 \newcommand\@twin[3][]{\omdoc@index[#1]{#2!#3}\omdoc@index[#1]{#3!#2}} And again we have two interface macros building on this \twinalt 103 \newcommand\twinalt[4][]{#2\@twin[#1]{#3}{#4}} \twinalt 104 \newcommand\twintoo[3][]{{#2 #3}\Gtwin[#1]{#2}{#3}} % and use the word compound too \@atwin this puts adjectivized two-compound words into the index in various permutations⁵ 105 \newcommand\@atwin[4][]{\omdoc@index[#1]{#2!#3!#4}\omdoc@index[#1]{#3!#2 (#4)}} and the two interface macros for this case:

 $^5\mathrm{EdNote}$: what to do with the optional argument here and below?

```
\@atwinalt
```

 $106 \label{localization} 106 \label{localization} 106 \label{localization} $$106 \label{localization$

\atwintoo

107 \newcommand\atwintoo[4][]{{#2 #3 #4}\@atwin[#1]{#2}{#3}{#4}}

% and use it too

4.6 Miscellaneous

Some shortcuts that use math symbols but are not mathematical at all; in particular, they should not be translated by LATEXML.

- 108 \newcommand \hateq{\ensuremath{\hat=}\xspace}
- 109 \newcommand\hatequiv{\ensuremath{\hat\equiv}\xspace}
- 110 \@ifundefined{ergo}%
- 111 {\newcommand\ergo{\ensuremath{\leadsto}\xspace}}%
- 112 {\renewcommand\ergo{\ensuremath{\leadsto}\xspace}}%
- 113 \newcommand{\reflect@squig}[2]{\reflectbox{\$\m@th#1\rightsquigarrow\$}}%
- 114 \newcommand\ogre{\ensuremath{\mathrel{\mathpalette\reflect@squig\relax}}\xspace}%
- 115 (/package)

Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.

 $\begin{array}{ccc} \text{Abelian} & \text{group} \\ \text{group,} & 5 & \text{Abelian,} & 5 \end{array}$
