# hwexam.sty/cls: An Infrastructure for formatting Assignments and Exams\*

# Michael Kohlhase Jacobs University, Bremen http://kwarc.info/kohlhase

April 14, 2015

#### Abstract

The hwexam package and class allows individual course assignment sheets and compound assignment documents using problem files marked up with the problem package.

<sup>\*</sup>Version v1.0 (last revised 2013/12/12)

#### 1 Introduction

The hwexam package and class supplies an infrastructure that allows to format nice-looking assignment sheets by simply including problems from problem files marked up with the problem package [Kohlhase:problem:ctan]. It is designed to be compatible with problems.sty, and inherits some of the functionality.

#### 2 The User Interface

#### 2.1 Package and Class Options

The hwexam package and class take the options solutions, notes, hints, pts, min, and boxed that are just passed on to the problems package (cf. its documentation for a description of the intended behavior).

showmeta

If the **showmeta** option is set, then the metadata keys are shown (see [**Kohlhase:metakeys:ctan**] for details and customization options).

The hwexam class additionally accepts the options report, book, chapter, part, and showignores, of the omdoc package [Kohlhase:smomdl:ctan] on which it is based and passes them on to that. For the extrefs option see [Kohlhase:sref:ctan].

#### 2.2 Assignments

assignment number

This package supplies the assignment environment that groups problems into assignment sheets. It takes an optional KeyVal argument with the keys number (for the assignment number; if none is given, 1 is assumed as the default or — in multi-assignment documents — the ordinal of the assignment environment), title (for the assignment title; this is referenced in the title of the assignment sheet), type (for the assignment type; e.g. "quiz", or "homework"), given (for the date the assignment was given), and due (for the date the assignment is due).

title type given due

#### 2.3 Typesetting Exams

multiple

Furthermore, the hwexam package takes the option multiple that allows to combine multiple assignment sheets into a compound document (the assignment sheets are treated as section, there is a table of contents, etc.).

test

Finally, there is the option test that modifies the behavior to facilitate formatting tests. Only in test mode, the macros \testspace, \testnewpage, and \testemptypage have an effect: they generate space for the students to solve the given problems. Thus they can be left in the LATEX source.

\testspace \testnewpage \testemptypage \testspace takes an argument that expands to a dimension, and leaves vertical space accordingly. \testnewpage makes a new page in test mode, and \testemptypage generates an empty page with the cautionary message that this page was intentionally left empty.

testheading duration Finally, the \testheading takes an optional keyword argument where the keys duration specifies a string that specifies the duration of the test, min specifies the

min

reqpts equivalent in number of minutes, and reqpts the points that are required for a perfect grade.

\title{320101 General Computer Science (Fall 2010)}
\begin{testheading}[duration=one hour,min=60,reqpts=27]
 Good luck to all students!
\end{testheading}

formats to

Matriculation Number:

# 320101 General Computer Science (Fall 2010)

April 14, 2015

#### You have one hour(sharp) for the test;

Write the solutions to the sheet.

The estimated time for solving this exam is 58 minutes, leaving you 2 minutes for revising your exam.

You can reach 30 points if you solve all problems. You will only need 27 points for a perfect score, i.e. 3 points are bonus points.

Different problems test different skills and knowledge, so do not get stuck on one problem.

prob.	1.1	2.1	2.2	2.3	3.1	3.2	3.3	Sum	grade
total	4	4	6	6	4	4	2	30	
reached									

good luck

Example 1: A generated test heading.

#### 2.4 Including Assignments

\includeassignment

The \includeassignment macro can be used to include an assignment from another file. It takes an optional KeyVal argument and a second argument which is a path to the file containing the problem (the macro assumes that there is only one assignment environment in the included file). The keys number, title, type, given, and due are just as for the assignment environment and (if given) overwrite the ones specified in the assignment environment in the included file.

number title type given

due

#### 2.5 Support for MathHub

Much of the STEX content is hosed on MathHub (http://MathHub.info), a portal and archive for flexiformal mathematics. MathHub offers GIT repositories (public and private escrow) for mathematical documentation projects, online and offline authoring and document development infrastructure, and a rich, interactive reading interface. The modules package supports repository-sensitive operations on MathHub.

Note that MathHub has two-level repository names of the form  $\langle group \rangle / \langle repo \rangle$ , where  $\langle group \rangle$  is a MathHub-unique repository group and  $\langle repo \rangle$  a repository name that is  $\langle group \rangle$ -unique. The file and directory structure of a repository is arbitrary – except that it starts with the directory source because they are Math Archives in the sense of [HorlacJuc:cscpnrr11]. But this structure can be hidden from the STEX author with MathHub-enabled versions of the modules macros.

\includemhassignment

The \includemhassignment macro is a variant of \includeassignment with repository support. Instead of writing

\defpath{MathHub}{/user/foo/lmh/MathHub}
\includeassignment[pts=7]{\MathHub{fooMH/bar/source/baz/foobar}}

we can simply write (assuming that \MathHub is defined as above)

\includemhassignment[fooMH/bar]{baz/foobar}

If baz/foobar is the "current module", i.e. if we are on the MathHub path ...MathHub/fooMH/bar..., then stating the repository in the first optional argument is redundant, so we can just use

\includemhassignment{baz/foobar}

Of course, neither LATEX nor LATEXMLknow about the repositories when they are called from a file system, so we can use the \mmcurrentrepos macro from the modules package to tell them. But this is only needed to initialize the infrastructure in the driver file. In particular, we do not need to set it in in each module, since the \importmhmodule macro sets the current repository automatically.

Caveat if you want to use the MathHub support macros (let's call them mhvariants), then every time a module is imported or a document fragment is included from another repos, the mh-variant \importmhmodule must be used, so that the "current repository" is set accordingly. To be exact, we only need to use mhvariants, if the imported module or included document fragment use mh-variants.

#### 3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the STEX TRAC [sTeX:online].

1. none reported yet.

# 4 Implementation: The hwexam Class

The functionality is spread over the hwexam class and package. The class provides the document environment and pre-loads some convenience packages, whereas the package provides the concrete functionality.

hwexam.dtx generates four files: hwexam.cls (all the code between  $\langle *cls \rangle$  and  $\langle /cls \rangle$ ), hwexam.sty (between  $\langle *package \rangle$  and  $\langle /package \rangle$ ) and their LATEXML bindings (between  $\langle *ltxml.cls \rangle$  and  $\langle /ltxml.cls \rangle$  and  $\langle *ltxml.sty \rangle$  and  $\langle /ltxml.sty \rangle$  respectively). We keep the corresponding code fragments together, since the documentation applies to both of them and to prevent them from getting out of sync.

#### 4.1 Class Options

To initialize the hwexam class, we declare and process the necessary options by passing them to the respective packages and classes they come from.

```
2 \DeclareOption{test}{\PassOptionsToPackage{\CurrentOption}{hwexam}}
3 \DeclareOption{multiple}{\PassOptionsToPackage{\CurrentOption}{hwexam}}
4 \DeclareOption{showmeta}{\PassOptionsToPackage{\CurrentOption}{metakeys}}
5 \DeclareOption{extrefs}{\PassOptionsToPackage{\CurrentOption}{sref}}
6 \DeclareOption{notes}{\PassOptionsToPackage{\CurrentOption}{problem}}
7 \DeclareOption{hints}{\PassOptionsToPackage{\CurrentOption}{problem}}
8 \DeclareOption{solutions}{\PassOptionsToPackage{\CurrentOption}{problem}}
9 \DeclareOption{pts}{\PassOptionsToPackage{\CurrentOption}{problem}}
10 \DeclareOption{min}{\PassOptionsToPackage{\CurrentOption}{problem}}
11 \DeclareOption{boxed}{\PassOptionsToPackage{\CurrentOption}{problem}}
12 \DeclareOption{extract}{\PassOptionsToPackage{\CurrentOption}{problem}}
13 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{omdoc}}
14 \ProcessOptions
15 (/cls)
16 (*ltxml.cls)
17 # -*- CPERL -*-
18 package LaTeXML::Package::Pool;
19 use strict:
20 use LaTeXML::Package;
21 use LaTeXML::Util::Pathname;
22 use Cwd qw(cwd abs_path);
23 DeclareOption('test',,sub {PassOptions('hwexam','sty',ToString(Digest(T_CS('\CurrentOption'))))
24 DeclareOption('multiple',sub {PassOptions('hwexam','sty',ToString(Digest(T_CS('\CurrentOption'))
25 DeclareOption('showmeta', sub {PassOptions('metakeys', 'sty', ToString(Digest(T_CS('\CurrentOption
26 DeclareOption('extrefs', sub {PassOptions('sref', 'sty', ToString(Digest(T_CS('\CurrentOption'))))
27 DeclareOption('notes',sub {PassOptions('problem','sty',ToString(Digest(T_CS('\CurrentOption')))
28 DeclareOption('hints',sub {PassOptions('problem','sty',ToString(Digest(T_CS('\CurrentOption')))
29 DeclareOption('solutions',sub {PassOptions('problem','sty',ToString(Digest(T_CS('\CurrentOption
30 DeclareOption('pts',sub {PassOptions('problem','sty',ToString(Digest(T_CS('\CurrentOption'))));
31 DeclareOption('min',sub {PassOptions('problem','sty',ToString(Digest(T_CS('\CurrentOption'))))
32 DeclareOption('boxed', sub {PassOptions('problem', 'sty', ToString(Digest(T_CS('\CurrentOption')))
```

33 DeclareOption('extract',sub {PassOptions('problem','sty',ToString(Digest(T\_CS('\CurrentOption')

```
34 DeclareOption(undef,sub {PassOptions('omdoc','cls',ToString(Digest(T_CS('\CurrentOption')))); }
35 ProcessOptions();
_{36} \langle /ltxml.cls \rangle
   We load omdoc.cls, and the desired packages. For the LATEXML bindings,
we make sure the right packages are loaded.
37 (*cls)
38 \LoadClass{omdoc}
39 \RequirePackage{stex}
40 \RequirePackage{hwexam}
41 \RequirePackage{graphicx}
42 \RequirePackage{a4wide}
43 \RequirePackage{amssymb}
44 \RequirePackage{amstext}
45 \RequirePackage{amsmath}
46 \langle /cls \rangle
47 (*ltxml.cls)
48 LoadClass('omdoc');
49 RequirePackage('stex');
50 RequirePackage('hwexam');
51 RequirePackage('graphicx');
52 RequirePackage('amssymb');
53 RequirePackage('amstext');
54 RequirePackage('amsmath');
55 (/ltxml.cls)
```

# 5 Implementation: The hwexam Package

#### 5.1 Package Options

The first step is to declare (a few) package options that handle whether certain information is printed or not. Some come with their own conditionals that are set by the options, the rest is just passed on to the problems package.

Here comes the equivalent header information for LATEXML, we also initialize the package inclusions. Since LATEXML does not handle options yet, we have nothing to do.

```
70 (*ltxml)
71 # -*- CPERL -*-
72 package LaTeXML::Package::Pool;
73 use strict;
74 use LaTeXML::Package;
75 DeclareOption('test', '');
76 DeclareOption('multiple', '');
77 DeclareOption('showmeta', sub {PassOptions('metakeys','sty',ToString(Digest(T_CS('\CurrentOptio
78 DeclareOption(undef, sub {PassOptions('problem','sty',ToString(Digest(T_CS('\CurrentOption'))))
79 ProcessOptions();
80 RequirePackage('problem');
81 (/ltxml)
   Then we register the namespace of the requirements ontology
83 RegisterNamespace('assig'=>"http://omdoc.org/ontology/assignments#");
84 RegisterDocumentNamespace('assig'=>"http://omdoc.org/ontology/assignments#");
85 (/ltxml)
```

#### 5.2 Assignments

We will prepare the keyval support for the assignment environment.

The next three macros are intermediate functions that handle the case gracefully, where the respective token registers are undefined.

The \given@due macro prints information about the given and due status of the assignment. Its arguments specify the brackets.

```
93 \newcommand\given@due[2]{%
94 \ifx \inclassig@given\@empty
95 \ifx \assig@given\@empty
96 \ifx \inclassig@due\@empty
97 \ifx \assig@due\@empty% all empty do nothing
98 \else #1%
99 \fi
100 \else #1%
101 \fi
102 \else #1%
103 \fi
104 \else #1%
```

```
105 \fi
106 \ifx\inclassig@given\@empty
107 \ifx\assig@given\@empty% do nothing
108 \else Given \assig@given%
109 \fi
110 \else Given \inclassig@given%
111 \fi
112 \ifx \inclassig@due\@empty
113 \ifx \assig@due\@empty% do nothing
114 \else
115 \ifx \inclassig@given\@empty
116 \ifx \assig@given\@empty% do nothing
117 \else ,~%
118 \fi
119 \else , ~%
120 \fi
121 \fi
122 \else
123 \ifx \inclassig@given\@empty
124 \ifx \assig@given\@empty% do nothing
125 \setminus else , ~\%
126 \fi
127 \else ,~%
128 \fi
129 \fi
130 \ifx \inclassig@due\@empty
131 \ifx \assig@due\@empty% do nothing
132 \else Due \assig@due%
133 \fi
134 \else Due \inclassig@due%
135 \fi
136 \ifx \inclassig@given\@empty
137 \ifx \assig@given\@empty
138 \ifx \inclassig@due\@empty
139 \ifx \assig@due\@empty% all empty do nothing
140 \else #2%
141 \fi
142 \else #2%
143 \fi
144 \else #2%
145 \fi
146 \else #2%
147\fi
148 }
```

assignment@title This macro prints the title of an assignment, the local title is overwritten, if there is one from the \includeassignment. \assignment@title takes three arguments the first is the fallback when no title is given at all, the second and third go around the title, if one is given.

```
149 \newcommand\assignment@title[3]
150 {\ifx\inclassig@title\@empty% if there is no outside title
151 \ \texttt{`ifx\assig@title\@empty{#1}\else{\#2\assig@title{\#3}}\fi
152 \else{#2}\inclassig@title{#3}\fi}% else show the outside title
```

With them, we can define the central assignment environment. This has two forms (separated by \ifmultiple) in one we make a title block for an assignment sheet, and in the other we make a section heading and add it to the table of contents.

assignment@titleblock This macro prints the title block of a section. If the multiple package option is given we make a section heading out of this, and if not, a title block.

```
153 \ifmultiple
154 \newcommand\assignment@titleblock{%
155 \section*{\protect\document@hwexamtype~\arabic{section}%
156 \assignment@title{}{\;(}{)\;}\given@due{}{}}%
157 \addcontentsline{toc}{section}%
158 {\document@hwexamtype~{\arabic{section}}:~%
159 \string\importmodules{\imported@modules}\assig@title}%
160 \setcounter{problem}{0}}
```

Now to the single assignment case, where we make a title block. Note that as problems are numbered by section, we also set the section counter.

```
161 \else% single
162 \newcommand\assignment@titleblock{%
163 \begin{center}\bf
164 \Large\@title\strut\\
165 \document@hwexamtype~\arabic{section}\assignment@title{\;}{:\;}{\\}%
166 \leq (--); {\cdot}, --
167 \end{center}}
168 \fi% ifmultiple
```

#### assignment

```
169 \newenvironment{assignment}[1][]{\metasetkeys{assig}{#1}\sref@target%

#### 5.3 Including Assignments

\in\*assignment

This macro is essentially a glorified \include statement, it just sets some internal macros first that overwrite the local points Importantly, it resets the inclassig keys after the input.

```
209 (*package)
210 \addmetakey{inclassig}{number}
211 \addmetakey*{inclassig}{title}
212 \addmetakey{inclassig}{type}
213 \addmetakey{inclassig}{given}
214 \addmetakey{inclassig}{due}
215 \addmetakey{inclassig}{mhrepos}
216 \clear@inclassig@keys%initially
217 \newcommand\includeassignment[2][]{\metasetkeys{inclassig}{#1}%
218 \include{#2}\clear@inclassig@keys}
219 \newcommand\inputassignment[2][]{\metasetkeys{inclassig}{#1}%
220 \input{#2}\clear@inclassig@keys}
221 (/package)
222 (*ltxml)
223 DefMacro('\includeassignment [] {}', sub {
     my ($stomach, $arg1, $arg2) = @_;
225
     AssignValue('inclassig', $arg1) if $arg1;
     (Invocation(T_CS('\input'), \arg2) -> unlist);
226
```

```
228 DefMacro('\inputassignment [] {}','\includeassignment[#1]{#2}');
             229 (/ltxml)
              5.4 Typesetting Exams
\quizheading
             230 (*package)
             231 \texttt{\addmetakey{quizheading}{tas}}
             232 \newcommand\quizheading[1]{\def\0tas{#1}%

### 5.5 Support for MathHub

\includemhassignment

The \includemhassignment saves the current value of \mh@currentrepos in a local macro \mh@crepos, resets \mh@currentrepos to the new value if one is given in the optional argument, and after importing resets \mh@currentrepos to the old value in \mh@crepos.

```

#### 5.6 Leftovers

at some point, we may want to reactivate the logos font, then we use

```
here we define the logos that characterize the assignment \font\bierfont=../assignments/bierglas \font\denkerfont=../assignments/denker \font\uhrfont=../assignments/uhr \font\warnschildfont=../assignments/achtung \newcommand\bierglas{{\bierfont\char65}} \newcommand\denker{{\denkerfont\char65}} \newcommand\uhrf{\uhrfont\char65}} \newcommand\warnschildf{\warnschildfont\char 65}} \newcommand\warnschildf{\warnschildfont\char 65}} \newcommand\hardA{\warnschild} \newcommand\hardA{\warnschild} \newcommand\hinkA{\denker} \newcommand\discussA{\bierglas}}
```

Finally, we need to terminate the file with a success mark for perl.  $355 \langle |txml \rangle 1$ ;
