Requirements for Semantic Requirements Documents

Michael Kohlhase John Doe

Contributor:

November 17, 2012

07.02.08 - Version: 1.0 - Contributor:
made initiale version 1.0 (empty skeleton file)

07.03.08 - Version: 1.1 - Contributor:
added two requirements

12.05.08 - Version: 1.2 - Contributor:
simplified some formulations

added third requirement that depends on the first two.

Certification

17.05.08

12.02.08 - Version: 1.1 - Certifier:

- Version: 1.3 -

New State: needs work

some formulations still unclear, but correct in principle

15.05.08 - Version: 1.2 - Certifier:

New State: at DFKI

may need another requirement.

19.02.08 - Version: 1.3 - Certifier:

New State: at DFKI

certified: this is what DFKI wants.

1 Introduction

In this document we show how to use the **reqdoc** package, unfortauntely, the requirements themselves are quite phony, since they are only for introductory purposes.

2 Some Requirements

U1: (Priority: 2) Accept data from heterogeneous data sources

Note: in particular: $DATA^{tm}$

U2: (Priority: 1) do something with the data to test the reference

Note: not really, this is just a test

U3: (Priority: 1) do something with the data to test the reference

Note: not really, this is just a test [from 1,2]

3 Requirements as tables

We can also format requirements as tables

#	Prio	Requirement	Notes	Refs
U1	2	Accept data from heterogeneous data	in particular: $DATA^{tm}$	
		sources		
U2	1	do something with the data to test the	not really, this is just a test	
		reference		
		do something with the data to test the		
		reference		
U3	1	do something with the data to test the	not really, this is just a test	1,2
		reference		

4 Conclusion

See, it was quite simple
