# MathHub Support for STEX\*

# Michael Kohlhase Jacobs University, Bremen http://kwarc.info/kohlhase

November 12, 2015

#### Abstract

The sref package is part of the STEX collection, a version of TEX/LATEX that allows to markup TEX/LATEX documents semantically without leaving the document format, essentially turning TEX/LATEX into a document format for mathematical knowledge management (MKM).

The  ${\tt mathhub}$  packages extend SIEX with support for the MathHub.info portal

#### 1 Introduction

Much of the STEX content is hosted on MathHub (http://MathHub.info), a portal and archive for flexiformal mathematics. MathHub offers GIT repositories (public and private escrow) for mathematical documentation projects, online and offline authoring and document development infrastructure, and a rich, interactive reading interface. The modules package supports repository-sensitive operations on MathHub.

Note that MathHub has two-level repository names of the form  $\langle group \rangle / \langle repo \rangle$ , where  $\langle group \rangle$  is a MathHub-unique repository group and  $\langle repo \rangle$  a repository name that is  $\langle group \rangle$ -unique. The file and directory structure of a repository is arbitrary – except that it starts with the directory source because they are Math Archives in the sense of [Hor+11]. But this structure can be hidden from the STEX author with MathHub-enabled versions of the STEX macros, which are defined in this package.

Caveat if you want to use the MathHub support macros (let's call them mh-variants), then every time a module is imported or a document fragment is included from another repos, the mh-variant \importmhmodule must be used, so that the "current repository" is set accordingly. To be exact, we only need to use mh-variants, if the imported module or included document fragment use mh-variants.

## 2 The User Interface

## 2.1 Package Options

none so far

#### 2.2 modules-mh: MH Variants for Modules

\importmhmodule

The importmhmodule macro is a variant of \importmodule with repository support. Instead of writing

\defpath{MathHub}{/user/foo/lmh/MathHub}
\importmodule[load=\MathHub{fooMH/bar/source/baz/foobar}]{foobar}

we can simply write (assuming that \MathHub is defined as above)

\importmhmodule[repos=fooMH/bar,path=baz/foobar]{foobar}

Note that the **\importmhmodule** form is more semantic, which allows more advanced document management features in MathHub.

If baz/foobar is the "current module", i.e. if we are on the MathHub path ...MathHub/fooMH/bar..., then stating the repository in the first optional argument is redundant, so we can just use

\importmhmodule[path=baz/foobar]{foobar}

if no file needs to loaded, \importmhmodule is the same as \importmodule.

\mhcurrentrepos

Of course, neither LATEX nor LATEXMLknow about the repositories when they are called from a file system, so we can use the \mhcurrentrepos macro to tell them. But this is only needed to initialize the infrastructure in the driver file. In particular, we do not need to set it in in each module, since the \importmhmodule macro sets the current repository automatically.

\usemhmodule \mhinputref \mhinput The \usemhmodule is the analog to \usemodule.

For this, the modules package supplies the mh-variants  $\mbox{mhinput}$  and  $\mbox{mhinput}$  of the  $\mbox{input}$  macro introduced above and normal  $\mbox{ETEX}$   $\mbox{input}$  macro.

#### 2.3 omtext-mh: MH Variants for OMText

\mhcgraphics

The \mhcgraphics macro is a variant of \mycgraphics with repository support. Instead of writing

```
\defpath{MathHub}{/user/foo/lmh/MathHub}
\mycgraphics{\MathHub{fooMH/bar/source/baz/foobar}}
```

we can simply write (assuming that \MathHub is defined as above)

\mhcgraphics[fooMH/bar]{baz/foobar}

Note that the \mhcgraphics form is more semantic, which allows more advanced document management features in MathHub.

#### 2.4 statements-mh: MH Variants for Statements

this only provides  $\usembrocab$  a variant of  $\usevocab$  (which might go away at some time)

#### 2.5 smultiling-mh: MH Variants for Multilinguality

1 2

### 2.6 structview-mh: MH Variants for Structures and Views

3

EdN:1

EdN:3

### 2.7 mikoslides-mh: Support for MiKo Slides

\mhframeimage

The \mhframeimage macro is a variant of \frameimage with repository support. Instead of writing

\defpath{MathHub}{/user/foo/lmh/MathHub}
\frameimage{\MathHub{fooMH/bar/source/baz/foobar}}

we can simply write (assuming that \MathHub is defined as above)

\mhframeimage[fooMH/bar]{baz/foobar}

Note that the \mhframeimage form is more semantic, which allows more advanced document management features in MathHub.

If baz/foobar is the "current module", i.e. if we are on the MathHub path ...MathHub/fooMH/bar..., then stating the repository in the first optional argument is redundant, so we can just use

\mhframeimage{baz/foobar}

#### 2.8 **problem-mh**: Support for Problems

\includemhproblem

The \includemhproblem macro is a variant of \importmodule with repository support. Instead of writing

\defpath{MathHub}{/user/foo/lmh/MathHub}
\includeproblem[pts=7]{\MathHub{fooMH/bar/source/baz/foobar}}

we can simply write (assuming that \MathHub is defined as above)

\includemhproblem[fooMH/bar]{baz/foobar}

Note that the \importmhproblem form is more semantic, which allows more advanced document management features in MathHub.

#### 2.9 hwexam-mh: Support for Assignments

\includemhassignment

The \includemhassignment macro is a variant of \includeassignment with repository support. Instead of writing

\defpath{MathHub}{/user/foo/lmh/MathHub}
\includeassignment[pts=7]{\MathHub{fooMH/bar/source/baz/foobar}}

we can simply write (assuming that \MathHub is defined as above)

\includemhassignment[fooMH/bar]{baz/foobar}

 $<sup>^1\</sup>mathrm{Ed}\mathrm{Note}\colon$  needs to be documented

 $<sup>^2\</sup>mathrm{EdNote}$ : mhmodsig seems to be missing what happened?

 $<sup>^3\</sup>mathrm{EdNote}$ : needs to be documented

# 3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the STEX GitHub repository [sTeX].

1. none reported yet.

# 4 Implementation

The sref package generates two files: the LATEX package (all the code between <code>\\*package</code>) and <code>\/package</code>) and the LATEXML bindings (between <code>\\*ltxml</code>) and <code>\/ltxml</code>). We keep the corresponding code fragments together, since the documentation applies to both of them and to prevent them from getting out of sync.

We first set up header information for the LATEXML binding files an the base package.

```
1 (*Itxml | modules.ltxml | structview.ltxml | omtext.ltxml | statements.ltxml | smultiling.ltxml | mikoslides.ltxml | probler
2 # -*- CPERL -*-
3 package LaTeXML::Package::Pool;
4 use strict;
5 use LaTeXML::Package;
6 use LaTeXML::Util::Pathname;
7 (/ltxml | modules.ltxml | structview.ltxml | omtext.ltxml | statements.ltxml | smultiling.ltxml | mikoslides.ltxml | probler
Then we need to set up the packages by requiring the metakeys pack-
age [Koh15] to be loaded (in the right version).
9 (*package)
10 \RequirePackage{keyval}
11 (/package)
12 (*ltxml)
13 RequirePackage('keyval');
14 (/ltxml)
```

#### 4.1 General Infrastructure

\mhcurrentrepos \@mhcurrentrepos \mhcurrentrepos is used to initialize the current repository. If the repos has changed, it writes a call to the internal macro \@mhcurrentrepos for the aux file and calls it. So that the \importmodule calls there work with the correct repos.

```
15 (*package)
16 \newcommand\mhcurrentrepos[1]{%
    \ensuremath{\texttt{def}\@\text{test{#1}}\%}
17
    \ifx\@test\mh@currentrepos% if new dir = old dir
18
19
      \relax% no need to change
20
      \protected@write\@auxout{}{\string\@mhcurrentrepos{#1}}%
21
22
    \@mhcurrentrepos{#1}% define mh@currentrepos
23
24 }%
25 \newcommand\@mhcurrentrepos[1]{\edef\mh@currentrepos{#1}}%
26 (/package)
27 (*ltxml)
28 DefMacro('\mhcurrentrepos{}','\@mhcurrentrepos{#1}');
29 DefMacro('\@mhcurrentrepos{#1}\0@mhcurrentrepos{#1}');
30 DefConstructor('\@@mhcurrentrepos{}','',
    afterDigest => sub{ AssignValue('current_repos',ToString($_[1]->getArg(1)),'global'); } );
32 (/ltxml)#$
```

```
\libinput the \libinput macro inputs from the lib directory of the MathHub repository
           or the meta-inf/lib repos of the group.
           33 (*package)
           34 \def\modules@@first#1/#2;{#1}
           35 \newcommand\libinput[1]{\def\@libfile{\MathHub{\mh@currentrepos/lib/#1}}%
           36 \IfFileExists{\@libfile}{\input\@libfile}%
           37 {\edef\@@group{\expandafter\modules@@first\mh@currentrepos;}
           38 \edef\@inffile{\MathHub{\@@group/meta-inf/lib/#1}}
           39 \IfFileExists{\@inffile}{\input{\@inffile}}%
           40 {\PackageError{modules}
               {Library file missing, cannot input #1\MessageBreak%
           42
                 Both \@libfile.tex\MessageBreak and \@inffile.tex\MessageBreak do not exist}%
               {Check whether the file name is correct}}}}
           43
           44 (/package)
           45 (*ltxml)
           46 DefMacro('\modules@@first#1/#2;','#1');
           47 DefMacro('\libinput {}', sub{
           48
                 my ($gullet, $name) = @_;
                 $name = ToString($name);
           49
                 #Relative paths for recursive search
           50
           51
                 my $FIRSTLIB = ('/../../lib');
                 my $SECONDLIB = ('/../../meta-info/lib');
           53
                 my $file = pathname_find($name, types => ['tex'], paths =>[$FIRSTLIB]);
                 $file = pathname_find($name, types=>['tex'], paths=>[$SECONDLIB]) unless $file;
           54
                 # Singal error if the file cannot be found
           55
                 LaTeXML::Package::InputContent($file, noerror=>1); });
           56
           57 (/ltxml)
```

#### 4.2 modules-mh: MH Variants for Modules

We set up package options and pass them on to the modules package, which we also load.

```
58 \( \section \) \ \text{FrovidesPackage{modules-mh}[2015/11/04 v1.0 MathHub support for the sTeX modules package] } \( \text{60 \RequirePackage{mathhub}} \) \( \lambda \) \( \lambda \) \( \lambda \) \( \text{modules} \rangle \) \( \lambda \) \( \text{modules.ltxml} \rangle \) \( \text{63 RequirePackage('mathhub');} \) \( \text{64 \lambda /modules.ltxml} \rangle \)
```

\importmhmodule

The  $\infty = value \ list$ ] {module} saves the current value of \mh@currentrepos in a local macro \mh@@repos, resets \mh@currentrepos to the new value if one is given in the optional argument, and after importing resets \mh@currentrepos to the old value in \mh@@repos. We do all the \ifx comparison with an \expandafter, since the values may be passed on from other key bindings. Parameters will be passed to \importmodule.

```
65 (*modules)
```

66 \srefaddidkey{importmhmodule}%

```
67 \addmetakey{importmhmodule}{repos}% saves the repo's path. E.g: smglom/numberfield
68 \addmetakey{importmhmodule}{path}% saves the module name. E.g: naturalnumbers
69 \addmetakey[sms]{importmhmodule}{ext}\% saves the extension: E.g. tex
70 \addmetakey[false]{importmhmodule}{conservative}[true]%
71 \newcommand\importmhmodule[2][]{%
     \metasetkeys{importmhmodule}{#1}%
73
     \ifx\importmhmodule@path\@empty% if module name is not set

#### problem-mh: Support for Problems 4.8

We set up package options and pass them on to the problem package, which we also load.

```
435 (*problem)
436 \ProvidesPackage{problem-mh}[2015/11/04 v1.0 MathHub support for the sTeX problem package]
437 \RequirePackage{mathhub}
438 (/problem)
439 (*problem.ltxml)
440 RequirePackage('mathhub');
441 (/problem.ltxml)
```

\includemhproblem The \includemhproblem saves the current value of \mh@currentrepos in a local macro \mh@curepos, resets \mh@currentrepos to the new value if one is given in the optional argument, and after importing resets  $\mbox{\sc mh@currentrepos}$  to the old value in  $\mbox{\sc mh@crepos}$ .

```
442 (*problem)
443 \newcommand\includemhproblem[2][]{\metasetkeys{inclprob}{#1}%
444 \edef\mh@@repos{\mh@currentrepos}%
445 \ifx\inclprob@mhrepos\@empty\else\mhcurrentrepos\inclprob@mhrepos\fi%
446 \input{\MathHub{\mh@currentrepos/source/#2}}%
