<sup>\*</sup>Version v0.3 (last revised 2016/04/04)

#### 1 Introduction

EdN:1 EdN:2 The dcm package allows mark up Dublin Core Metadata [DCM03] in LATEX documents so that it can be harvested by automated tools or exported to PDF<sup>1</sup>. This package allows to attribute authorship to arbitrary text fragments.<sup>2</sup>

#### 2 The User Interface

### 2.1 Package Options

showmeta

The dcm package takes a single option: showmeta. If this is set, then the metadata keys are shown (see [Koh15] for details and customization options).

#### 2.2 The DC Metadata Block

**DCmetadata** 

The dcm provides the environment DCmetadata for Dublin Core Metadata Blocks. DCmetadata defines local macros for the specifying the relevant Dublin Core metadata fields and takes an optional argument that specifies the presentation of the metadata block, see Figure 1 for an example which would generate the title block for the dcm package. Let us now come to the macros themselves

\DCMcreators \DCMcontributors The \DCMcreators and \DCMcontributors macros are used to specify the authors and contributors to a text fragments. These macros take one argument, the authorship of a document specified in terms of ids of persons specified via \WAperson before. They can occur multiply in a metadata block.

\DCMstitle
\DCMshorttitle
\DCMsubject
\DCMdescription
\DCMpublisher
\DCMdate
\DCMtype
\DCMidentifier

The \DCMshorttitle macro takes one argument, the The \DCMsubject macro takes one argument, the The \DCMdescription macro takes one argument, the

The \DCMpublisher macro takes one argument, the The \DCMdate macro takes one argument, the

The \DCMtype macro takes one argument, the

The \DCMtitle macro takes one argument, the

The \DCMidentifier macro takes two arguments, the first one is the identification system, and the second one the identifier string itself.

\DCMsource
\DCMlanguage
\DCMrelation
\DCMrights
\DCMlicense
\DCMabstract
\DCMlicensenotice
\DCMcopyrightnotice

\DCMcclicense

\attribution

The \DCMsource macro takes one argument, the The \DCMlanguage macro takes one argument, the The \DCMrelation macro takes one argument, the

The \DCMrights macro takes one argument, the

The \DCMlicense macro takes one argument, the The \DCMabstract macro takes one argument, the

The  $\DCMlicensenotice$  macro takes one argument, the

The \DCMcopyrightnotice macro takes one argument, the

The \DCMcclicense macro

 $<sup>^{1}{\</sup>rm EDNoTE}$ : This still needs to be implemented, see http://www.wlug.org.nz/PdfLatexNotes for details

  \DCMabstract{The {\texttt{dcm}} packge allows mark up Dublin Core Metadata in {\LaTeX} documents that can be harvested by automated tools or exported to PDF, while at the same time generating conventional title information.}
  \end{DCmetadata}
```

Example 1: The DC Metadata block for the dcm package documentation

#### 2.3 DCM Metadata Block Styles

maketitle
titlepage

The DCmetadata environment takes an optional argument that specifies the style the metadata block is rendered in. The dcm package supplies two styles: maketitle and titlepage. The former uses the \maketitle macro from the calling class to assemble a title, whereas the latter builds a title page from scratch. The title block of this documentation has been created by the maketitle style.

\dcm@\*@block

To add a further metadata block style  $\langle sty \rangle$ , we simply have to supply a  $\dcm@\langle sty \rangle$ @block macro that expands to the intended presentation. This macro does not take any arguments, but can use the internal token registers defined by the DCmetadata environment. Generally, for any of the metadata commands \DCM $\langle md \rangle$  defined in ?user.dcm.mdblock? there is a token register  $\dcm@\langle md \rangle$  that contains the value specified in the key.

#### 2.4 Configuration

The dcm package provides a set of macros that customize (e.g. for multiple languages) the generated content.

\dcm@abstract@heading
\dcm@creators@heading
\dcm@contributors@connector
\dcm@chapter@heading
\dcm@section@heading
\dcm@subsection@heading
\dcm@subsubsection@heading

Macro	Default
\dcm@abstract@heading	Abstract
\dcm@creators@heading	Author(s)
\dcm@contributors@connector	with contributions from
\dcm@chapter@heading	Chapter
\dcm@section@heading	Section
\dcm@subsection@heading	Subsection
\dcm@subsubsection@heading	Subsubsection

#### 3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the ST<sub>E</sub>X GitHub repository [sTeX].

1. none reported yet

## 4 The Implementation

#### 4.1 Package Options

The first step is to declare (a few) package options that handle whether certain information is printed or not. They all come with their own conditionals that are set by the options.

- 1 (\*package)
- \PassOptionsToPackage{\CurrentOption}{workaddress}}
- 4 \ProcessOptions

The first measure is to ensure that the KeyVal package is loaded (in the right version). For LATEXML we also initialize the package inclusions.

- 5 \RequirePackage{workaddress}
- 6 \RequirePackage[sectioning]{rdfmeta}

#### 4.2 The DC Metadata Block

Then we make an environment for defining the metadata. Note that since we have defined the omdoc:metadata element to auto-open and auto-close, we do not have to (and should not for that matter) supply it in the DCmetadata element.

#### DCmetadata

- 7 \newenvironment{DCmetadata}[1][]%
- $8 {\left\{ \frac{\#1}{}\right\} }$  to set the way things are presented.
- 9 {\@ifundefined{dcm@\@style @block}%
- 10 {\message{style {\@style} not defined}}%
- 11 {\csname dcm@\@style @block\endcsname}}

```
\DCMcreators
                                                                                      the \DCMcreators macro checks whether all ids are defined.
                                                                                      12 \def\DCMcreators#1{\@for\@I:=#1\do{\wa@ref@test{person}\@I{id}}
                                                                                      13 \gdef\dcm@creators{#1}}
                                 \DCMcontributors the \DCMcontributors macro also checks whether all ids are defined.
                                                                                      14 \end{CM} contributors \#1{\end{C}} id} \%
                                                                                      15 \def\democratical \#1}
