Slides and Course Notes for Jacobs University*

Michael Kohlhase Jacobs University, Bremen http://kwarc.info/kohlhase

October 23, 2015

Abstract

We present a document class from which we can generate both course slides and course notes in a transparent way. Furthermore, we present a set of LaTeXML bindings for these, so that we can also generate OMDoc-based course materials, e.g. for inclusion in the ActiveMath system.

Introduction 1

This Document class is derived from beamer.cls [Tana], specializes it with Jacobs stuff and adds a notes version that is more suited to printing than the one supplied by beamer.cls.

2 The User Interface

The mikoslides class takes the notion of a slide frame from Till Tantau's excellent beamer class and adapts its notion of frames for use in the STFX and OMDoc. To support semantic course notes, it extends the notion of mixing frames and explanatory text, but rather than treating the frames as images (or integrating their contents into the flowing text), the mikoslides package displays the slides as such in the course notes to give students a visual anchor into the slide presentation in the course (and to distinguish the different writing styles in slides and course notes).

In practice we want to generate two documents from the same source: the slides for presentation in the lecture and the course notes as a narrative document for home study. To achieve this, the mikoslides class has two modes: slides mode and notes mode which are determined by the package option.

2.1Package Options

mode (see Section 2.2).

The mikoslides class takes a variety of class options: 1

slides а

sectocframes

showmeta

of contents are produced headers ² showmeta. If this is set, then the metadata keys are shown (see [Koh15] for details and customization options).

• The options slides notes notes switch between slides mode and notes

• If the option sectocframes is given, then special frames with section table

frameimages

• If the option frameimages is set, then slide mode also shows the \frameimagegenerated frames.

2.2Notes and Slides

frame note Slides are represented with the frame just like in the beamer class, see [Tanb] for details. The mikoslides class adds the note environment for encapsulating the course note fragments.¹

Note that it is essential to start and end the notes environment at the start of the line – in particular, there may not be leading blanks – else IATEX becomes confused and throws error messages that are difficult to decipher.

EdN:2

EdN:1

 $^{^{1}\}mathrm{EdNote}$: leaving out noproblems for the moment until we decide what to do with it.

²EDNOTE: document the functionality

¹MK: it would be very nice, if we did not need this environment, and this should be possible in principle, but not without intensive LaTeX trickery. Hints to the author are welcome.

```
\begin{note}
  We start this course with ...
\end{note}

\begin{frame}
  \frametitle{The first slide}
  ...
\end{frame}
\begin{note}
  ... and more explanatory text
\end{note}

\begin{frame}
  \frametitle{The second slide}
  ...
\end{frame}
  ...
\end{frame}
...
```

Example 1: A typical Course Notes File

By interleaving the frame and note environments, we can build course notes as shown in Figure 1.

\frameimage th

Sometimes, we want to integrate slides as images after all – e.g. because we already have a PowerPoint presentation, to which we want to add STEXnotes. In this case we can use $\frac{\langle opt \rangle}{\langle path \rangle}$, where $\langle opt \rangle$ are the options of $\frac{\langle opt \rangle}{\langle opt \rangle}$ is the file path (extension can be left off like in $\frac{\langle opt \rangle}{\langle opt \rangle}$).

2.3 Header and Footer Lines

2.4 Colors and Highlighting

\textwarning

The \textwarning macro generates a warning sign:

- 2.5 Front Matter, Titles, etc
- 2.6 Miscellaneous

2.7 Support for MathHub

Much of the STEXcontent is hosed on MathHub (http://MathHub.info), a portal and archive for flexiformal mathematics. MathHub offers GIT repositories (public and private escrow) for mathematical documentation projects, online and offline authoring and document development infrastructure, and a rich, interactive reading interface. The modules package supports repository-sensitive operations on MathHub.

Note that MathHub has two-level repository names of the form $\langle group \rangle / \langle repo \rangle$, where $\langle group \rangle$ is a MathHub-unique repository group and $\langle repo \rangle$ a repository name that is $\langle group \rangle$ -unique. The file and directory structure of a repository is arbitrary – except that it starts with the directory source because they are Math Archives in the sense of [Hor+11]. But this structure can be hidden from the STEXauthor with MathHub-enabled versions of the modules macros.

\mhframeimage

The \mhframeimage macro is a variant of \frameimage with repository support. Instead of writing

```
\defpath{MathHub}{/user/foo/lmh/MathHub}
\frameimage{\MathHub{fooMH/bar/source/baz/foobar}}
```

we can simply write (assuming that \MathHub is defined as above)

\mhframeimage[fooMH/bar]{baz/foobar}

Note that the \mhframeimage form is more semantic, which allows more advanced document management features in MathHub.

If baz/foobar is the "current module", i.e. if we are on the MathHub path ...MathHub/fooMH/bar..., then stating the repository in the first optional argument is redundant, so we can just use

\mhframeimage{baz/foobar}

Of course, neither IATEX nor IATEXML know about the repositories when they are called from a file system, so we can use the \mhcurrentrepos macro from the modules package to tell them. But this is only needed to initialize the infrastructure in the driver file. In particular, we do not need to set it in in each module, since the \importmhmodule macro sets the current repository automatically.

Caveat if you want to use the MathHub support macros (let's call them mhvariants), then every time a module is imported or a document fragment is included from another repos, the mh-variant \importmhmodule must be used, so that the "current repository" is set accordingly. To be exact, we only need to use mhvariants, if the imported module or included document fragment use mh-variants.

3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the STFXGitHub repository [sTeX].

- 1. the class should be divided into concerns. [sTeX:online], issue 1684
- 2. when option book or report is given together with sectocframes chapterlevel omgroups generate a spurious slide with a bare heading. This has something to do with the fact that beamer does not support \chapter

4 The Implementation

The mikoslides package generates two files: the LATEX package (all the code between (*package) and (/package)) and the LATEXML bindings (between (*ltxml) and (/ltxml)). We keep the corresponding code fragments together, since the documentation applies to both of them and to prevent them from getting out of sync.

The general preamble for LATEXML: 1 (*Itxml.cls | Itxml.sty) 2 # -*- CPERL -*-3 package LaTeXML::Package::Pool; 4 use strict;

5 use LaTeXML::Package; 6 (/ltxml.cls | ltxml.sty)

12

13

Class and Package Options 4.1

We define some Package Options and switches for the mikoslides class and activate them by passing them on to beamer.cls and omdoc.cls and the mikoslides package.

```
7 \langle *cls \rangle
8 \newif\ifnotes\notesfalse
9 \DeclareOption{notes}{\notestrue\PassOptionsToPackage{\CurrentOption}{mikoslides}}
{\tt 10 \ NeclareOption\{slides\}\{notesfalse\ PassOptionsToPackage\{\ CurrentOption\}\{mikoslides\}\}\}}
11 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{omdoc}
                               \PassOptionsToClass{\CurrentOption}{beamer}
                               \PassOptionsToPackage{\CurrentOption}{mikoslides}}
14 \ProcessOptions
15 (/cls)
16 (*ltxml.cls)
17 DeclareOption(undef, sub {PassOptions('omdoc','cls',ToString(Digest(T_CS('\CurrentOption'))));
                                                PassOptions('mikoslides','sty',ToString(Digest(T_CS('
19 ProcessOptions();
20 (/ltxml.cls)
now we do the same for the mikoslides package. Note that we also have to define
the same switches<sup>3</sup>, since we might use mikoslides.sty in a different class.
21 (*package)
22 \newif\ifnotes\notesfalse
23 \DeclareOption{notes}{\notestrue}
24 \DeclareOption{slides}{\notesfalse}
25 \newif\ifsectocframes\sectocframesfalse
26 \DeclareOption{sectocframes}{\sectocframestrue}
27 \newif\ifframeimages\frameimagesfalse
28 \DeclareOption{frameimages}{\frameimagestrue}
```

29 \newif\if@part\@partfalse

30 \DeclareOption{report}{\@parttrue\PassOptionsToClass{\CurrentOption}{omdoc}}

 $^{^3\}mathrm{EdNote}$: MK: we may think about making all of them internal

```
31 \DeclareOption{book}{\@parttrue\PassOptionsToClass{\CurrentOption}{omdoc}}
32 \newif\ifproblems\problemstrue
33 \DeclareOption{noproblems}{\problemsfalse}
34 \DeclareOption*{\PassOptionsToPackage{\CurrentOption}{stex}
                              \PassOptionsToPackage{\CurrentOption}{tikzinput}}
35
36 \ProcessOptions
37 (/package)
38 (*ltxml.sty)
39 DeclareOption('notes', '');
40 DeclareOption('slides', '');
41 DeclareOption('noproblems', '');
42 DeclareOption('sectocframes', '');
43 DeclareOption('frameimages', '');
44 DeclareOption(undef, sub {PassOptions('stex','sty',ToString(Digest(T_CS('\CurrentOption'))));
                                              PassOptions('tikzinput','sty',ToString(Digest(T_CS('\
46 ProcessOptions();
47 RawTeX('\newif\ifnotes\notesfalse');
48 RawTeX('\newif\ifproblems\problemsfalse');
49 (/ltxml.sty)
   Depending on the options, we either load the article-based omdoc or the
beamer class. In the first case, we also have to make the beamer-specific things
available to article via the beamerarticle package. We use options to avoid
loading theorem-like environments, since we want to use our own from the STEX
packages.
50 (*cls)
51 \ifnotes
    \LoadClass{omdoc}
52
    \RequirePackage{a4wide}
53
    \RequirePackage{marginnote}
54
   \RequirePackage{mdframed}
55
56
   \RequirePackage[notheorems,noamsthm,noxcolor]{beamerarticle}
57 \else
    \LoadClass[notheorems,noamsthm,10pt]{beamer}
58
    \newcounter{Item}
59
    \newcounter{paragraph}
60
    \newcounter{subparagraph}
61
    \newcounter{Hfootnote}
62
    \usetheme{Jacobs}
63
64 \fi
65 \RequirePackage{mikoslides}
66 (/cls)
67 (*ltxml.cls)
68 LoadClass('omdoc');
69 RequirePackage('mikoslides');
70 DefConstructor('\usetheme{}','');
71 (/ltxml.cls)
   now, we load the remaining packages for both versions.
```

72 (*package)

```
73 \RequirePackage{stex}
74 \RequirePackage{tikzinput}
75 \RequirePackage{latexml}
76 \RequirePackage{amssymb}
77 \RequirePackage{amsmath}
78 \RequirePackage{comment}
79 \RequirePackage{textcomp}
80 \RequirePackage{url}
81 (/package)
82 (*ltxml.sty)
83 RequirePackage('stex');
84 RequirePackage('tikzinput', options => ['image']);
85 RequirePackage('latexml');
86 RequirePackage('amssymb');
87 RequirePackage('amsmath');
88 RequirePackage('graphicx');
89 RequirePackage('url');
90 (/ltxml.sty)
```

4.2 Notes and Slides

We define the sizes of slides in the notes. Somehow, we cannot get by with the same here.

note The note environment is used to leave out text in the slides mode. It does not have a counterpart in OMDoc. So for course notes, we define the note environment to be a no-operation otherwise we declare the note environment as a comment via the comment package.

```
100 (*package)
101 \ifnotes%
      \renewenvironment{note}{%
102
        \ignorespaces%
103
104
     }{}%
105 \else%
     \excludecomment{note}%
106
107 \fi%
108 \langle /package \rangle
109 (*ltxml.sty)
110 DefEnvironment('{note}','#body');
111 (/ltxml.sty)
```

We start by giving the LATEXML binding for the frame environment from the beamer class. We first set up the slide boxes in article mode. We set up sizes and provide a box register for the frames and a counter for the slides.

```
112 (*package)
      113 \ifnotes
           \newlength{\slideframewidth}
      114
           \setlength{\slideframewidth}{1.5pt}
      115
frame We first define the keys.
           \addmetakey{frame}{label}
      116
           \addmetakey[yes]{frame}{allowframebreaks}
      117
      118
           \addmetakey{frame}{allowdisplaybreaks}
      119
           \addmetakey[yes]{frame}{fragile}
      120
           \addmetakey[yes]{frame}{shrink}
           \addmetakey[yes]{frame}{squeeze}
      121
```

We redefine the itemize environment so that it looks more like the one in beamer with Jacobs theme. We create the box with the mdframed environment from the equinymous package. Then we define the environment, read them, and construct the slide number and label.

```
122
     \renewenvironment{frame}[1][]{%
        \metasetkeys{frame}{#1}%
123
124
       \stepcounter{slide}%
125
       \def\@currentlabel{\theslide}%
       \ifx\frame@label\@empty%
126
127
       \else%
         \label{\frame@label}%
128
129
        \fi%
```

We redefine the itemize environment so that it looks more like the one in beamer with Jacobs theme.

195 DefConstructor('\@frameimage{}',"<omdoc:omgroup layout='slide'>#1</omdoc:omgroup>\n");
196 (/ltxml.sty)
```

4.3 Header and Footer Lines

Now, we set up the infrastructure for the footer line of the slides, we use boxes for the logos, so that they are only loaded once, that considerably speeds up processing.

\setslidelogo

The default logo is the logo of Jacobs University. Customization can be done by \setslidelogo{ $\langle logo \ name \rangle$ }.

```
197 (*package)
198 \newlength{\slidelogoheight}
199 \ifnotes%
     \setlength{\slidelogoheight}{.4cm}%
201 \else%
     \setlength{\slidelogoheight}{1cm}%
202
203 \fi%
204 \newsavebox{\slidelogo}%
205 \sbox{\slidelogo}{\includegraphics[height=\slidelogoheight]{jacobs-logo}}%
206 \newrobustcmd{\setslidelogo}[1]{%
    \sbox{\slidelogo}{\includegraphics[height=\slidelogoheight]{#1}}%
208 }%
```

\setsource

\source stores the writer's name. By default it is Michael Kohlhase since he is the main user and designer of this package. $\$ can change the writer's name.

```
209 \def\source{Michael Kohlhase}% customize locally
210 \newrobustcmd{\setsource}[1]{\def\source{#1}}%
```

\setlicensing Now, we set up the copyright and licensing. By default we use the Creative Commons Attribuition-ShareAlike license to strengthen the public domain. If package hyperref is loaded, then we can attach a hyperlink to the license logo. \setlicensing[$\langle url \rangle$] { $\langle logo\ name \rangle$ } is used for customization, where $\langle url \rangle$ is optional.

```
211 \def\copyrightnotice{\footnotesize\copyright:\hspace{.3ex}{\source}}%
212 \newsavebox{\cclogo}%
214 \newif\ifcchref\cchreffalse%
215 \AtBeginDocument{%

274
     \xspace%
275 }%
276 (/package)
277 (*ltxml.sty)
278 DefMacro('\textwarning','\@textwarning\xspace');
279 DefConstructor('\@textwarning',"");
280 (/ltxml.sty)
```

4.5 Front Matter, Titles, etc

We need to redefine the frontmatter macros inherited from the beamer class for LaTeXML, since there they take an optional argument.

Now, we specialize the slide environment that we have implemented above or inherited from seminar.cls for some abbreviations, e.g. separator slides and title slides.

```
286 \langle *package \rangle

    \excludecomment{problems}%
459
460 \fi%
461 (/package)
462 (*ltxml.sty)
463 DefEnvironment('{problems}', '#body');
```

464 (/ltxml.sty)

4.8 Support for MathHub

\mhframeimage Use the current value of \mh@currentrepos or the value of the mhrepos key if it is given in \frameimage.

```
465 \langle package \rangle \land ddmetakey{Gin}{mhrepos}
466 (ltxml.sty)DefKeyVal('Gin', 'mhrepos', 'Semiverbatim');
467 (ltxml.sty)RawTeX('
_{468} \; \langle *ltxml.sty \mid package \rangle
469 \newcommand\mhframeimage[2][]{\%
      <text>
470
      \edef\mh@@repos{\mh@currentrepos}%
471
472
      \ifx\Gin@mhrepos\@empty%
        \frameimage[#1]{\MathHub{\mh@currentrepos/source/#2}}%
473
474
      \else%
        \frameimage[#1]{\MathHub{\Gin@mhrepos/source/#2}}%
475
      \fi%
476
477 }%
478 (/ltxml.sty | package)
479 \langle \mathsf{ltxml.sty} \rangle,;
```

4.9 Finale

Finally, we set the slide body font to the sans serif, and we terminate the LATEXML bindings file with a success mark for perl.

```
480~\langle package \rangle \ (ltxml.cls)1;
```
