^{*}Version v1.3 (last revised 2019/03/20)

1 Introduction

The problem package supplies an infrastructure that allows specify problem. Problems are text fragments that come with auxiliary functions: hints, notes, and solutions¹. Furthermore, we can specify how long the solution to a given problem is estimated to take and how many points will be awarded for a perfect solution.

Finally, the problem package facilitates the management of problems in small files, so that problems can be re-used in multiple environment.

2 The User Interface

2.1 Package Options

solutions notes hints pts The problem package takes the options solutions (should solutions be output?), notes (should the problem notes be presented?), hints (do we give the hints?), pts (do we display the points awarded for solving the problem?), min (do we display the estimated minutes for problem soling). If theses are specified, then the corresponding auxiliary parts of the problems are output, otherwise, they remain invisible.

boxed test

min

The boxed option specifies that problems should be formatted in framed boxes so that they are more visible in the text. Finally, the test option signifies that we are in a test situation, so this option does not show the solutions (of course), but leaves space for the students to solve them.

showmeta

Finally, if the **showmeta** is set, then the metadata keys are shown (see [Koh18] for details and customization options).

2.2 Problems and Solutions

problem

id pts min

min title

solution solutions

for height test

hint note The main environment provided by the problem package is (surprise surprise) the problem environment. It is used to mark up problems and exercises. The environment takes an optional KeyVal argument with the keys id as an identifier that can be reference later, pts for the points to be gained from this exercise in homework or quiz situations, min for the estimated minutes needed to solve the problem, and finally title for an informative title of the problem. For an example of a marked up problem see Figure 1 and the resulting markup see Figure 2.

The solution environment can be to specify a solution to a problem. If the solutions option is set or \solutionstrue is set in the text, then the solution will be presented in the output. The solution environment takes an optional KeyVal argument with the keys id for an identifier that can be reference for to specify which problem this is a solution for, and height that allows to specify the amount of space to be left in test situations (i.e. if the test option is set in the \usepackage statement).

, the hint and exnote environments can be used in a problem environment to

¹ for the moment multiple choice problems are not supported, but may well be in a future version

```
\usepackage[solutions,hints,pts,min]{problem}
\begin{document}
\begin{problem}[id=elefants,pts=10,min=2,title=Fitting Elefants]
    How many Elefants can you fit into a Volkswagen beetle?
\begin{hint}
    Think positively, this is simple!
\end{hint}
\begin{exnote}
    Justify your answer
\end{exnote}
\begin{solution}[for=elefants,height=3cm]
    Four, two in the front seats, and two in the back.
\end{solution}
    \end{problem}
\end{document}
```

Example 1: A marked up Problem

```
Problem 1 (Fitting Elefants)
How many Elefants can you fit into a Volkswagen beetle?

Hint: Think positively, this is simple!

Note: Justify your answer

Solution: Four, two in the front seats, and two in the back.
```

Example 2: The Formatted Problem from Figure 1

give hints and to make notes that elaborate certain aspects of the problem.

\startsolutions \stopsolutions

Sometimes we would like to locally override the solutions option we have given to the package. To turn on solutions we use the \startsolutions, to turn them off, \stopsolutions. These two can be used at any point in the documents.

2.3 Multiple Choice Blocks

mcb \mcc Multiple choice blocks can be formatted using the mcb environment, in which single choices are marked up with $\mbox{mcc}[\langle keyvals \rangle] \{\langle text \rangle\}$ macro, which takes an optional key/value argument $\langle keyvals \rangle$ for choice metadata and a required argument $\langle text \rangle$ for the proposed answer text. The following keys are supported

T F Ttext Ftext feedback

title

- T for true answers, F for false ones,
- Ttext the verdict for true answers, Ftext for false ones, and
- feedback for a short feedback text given to the student.

See Figure ?? for an example

2.4 Including Problems

\includeproblem

The \includeproblem macro can be used to include a problem from another file. It takes an optional KeyVal argument and a second argument which is a path to the file containing the problem (the macro assumes that there is only one problem in the include file). The keys title, min, and pts specify the problem title, the estimated minutes for solving the problem and the points to be gained, and their values (if given) overwrite the ones specified in the problem environment in the included file.

2.5 Reporting Metadata

The sum of the points and estimated minutes (that we specified in the pts and min keys to the problem environment or the \includeproblem macro) to the log file and the screen after each run. This is useful in preparing exams, where we want to make sure that the students can indeed solve the problems in an allotted time period.

The \min and \pts macros allow to specify (i.e. to print to the margin) the distribution of time and reward to parts of a problem, if the pts and pts package options are set. This allows to give students hints about the estimated time and the points to be awarded.

3 Limitations

In this section we document known limitations. If you want to help alleviate them, please feel free to contact the package author. Some of them are currently discussed in the ST_EX GitHub repository [sTeX].

```
\begin{problem}[title=Functions]
What is the keyword to introduce a function definition in python?
\begin{mcb}
\mcc[T]{def}
\mcc[F,feedback=that is for C and C++]{function}
\mcc[F,feedback=that is for Standard ML]{fun}
\mcc[F,Ftext=Nooooooooo,feedback=that is for Java]{public static void}
\end{mcb}
\end{problem}
```

Problem 2 (Functions)

What is the keyword to introduce a function definition in python?

- 1. def
- 2. function
- 3. fun
- 4. public static void

Problem 3 (Functions)

What is the keyword to introduce a function definition in python?

- 1. def Yes!
- 2. function

No, that is for C and C++

3. fun

No, that is for Standard ML

4. public static void

Noooooooo, that is for Java

Example 3: A Problem with a multiple choice block

1. none reported yet

4 The Implementation

4.1 Package Options

The first step is to declare (a few) package options that handle whether certain information is printed or not. They all come with their own conditionals that are set by the options.

```
1 (*package)
                                2 \newif\if@problem@mh@\@problem@mh@false
                                3 \DeclareOption{mh}{\@problem@mh@true}
                                4 \newif\ifexnotes\exnotesfalse
                                5 \DeclareOption{notes}{\exnotestrue}
                                6 \newif\ifhints\hintsfalse
                                7 \DeclareOption{hints}{\hintstrue}
                                8 \newif\ifsolutions\solutionsfalse
                                9 \DeclareOption{solutions}{\solutionstrue}
                              10 \neq 10 
                              11 \DeclareOption{pts}{\ptstrue}
                              12 \newif\ifmin\minfalse
                              13 \DeclareOption{min}{\mintrue}
                              14 \newif\ifboxed\boxedfalse
                              15 \DeclareOption{boxed}{\boxedtrue}
                              16 \ensuremath{\mbox{\constraint}} 16 \ensuremath{\mbox{\costant}} else 
                              17 \ProcessOptions
                                      Then we make sure that the necessary packages are loaded (in the right ver-
                              sions).
                              18 \if@problem@mh@\RequirePackage{problem-mh}\fi
                              19 \RequirePackage{omtext}
                              20 \RequirePackage{comment}
                              21 \RequirePackage{mdframed}
                              22 \RequirePackage[base] {babel}
                             For multilinguality, we define internal macros for keywords that can be specialized
\prob@*@kw
                              in *.ldf files.
                              23 \def\prob@problem@kw{Problem}
                              24 \def\prob@solution@kw{Solution}
                              25 \def\prob@hint@kw{Hint}
                              26 \def\prob@note@kw{Note}
                              27 \def\prob@pt@kw{pt}
                              28 \def\prob@min@kw{min}
                                      For the other languages, we set up triggers
                              29 \AfterBabelLanguage{ngerman}{\input{problem-ngerman.ldf}}
                              30 \AfterBabelLanguage{finnish}{\input{problem-finnish.ldf}}
                              31 \AfterBabelLanguage{french}{\input{problem-french.ldf}}
                              32 \AfterBabelLanguage{russian}{\input{problem-russian.ldf}}
```

4.2 Problems and Solutions

We now prepare the KeyVal support for problems. The key macros just set appropriate internal macros.

- 33 \srefaddidkey[prefix=prob.]{problem}
- 34 \addmetakey{problem}{pts}
- 35 \addmetakey{problem}{min}
- 36 \addmetakey*{problem}{title}
- 37 \addmetakey{problem}{refnum}

Then we set up a counter for problems.

\numberproblemsin

- 38 \newcounter{problem}
- 39 \newcommand\numberproblemsin[1]{\@addtoreset{problem}{#1}}

\prob@label

We provide the macro \prob@label to redefine later to get context involved.

 $40 \mbox{ } \mbox{newcommand\prob@label[1]{#1}}$

\prob@number

We consolidate the problem number into a reusable internal macro

- 41 \newcommand\prob@number{%
- 42 \ifx\inclprob@refnum\@empty% if there is no outside refnumb
- 43 \ifx\problem@refnum\@empty\prob@label\theproblem%
- 44 \else\prob@label\problem@refnum\fi%
- 45 \else\prob@label\inclprob@refnum\fi}

\prob@title

We consolidate the problem title into a reusable internal macro as well. \prob@title takes three arguments the first is the fallback when no title is given at all, the second and third go around the title, if one is given.

- 46 \newcommand\prob@title[3]{%
- 47 \ifx\inclprob@title\@empty% if there is no outside title
- $48 \ \texttt{\#2} \\ else \ \texttt{\#2} \\ \text{1} \\ \text{1} \\ \text{2} \\ \text{3} \\ \text{4} \\$
- 49 \else{#2}\inclprob@title{#3}\fi}% else show the outside title

With these the problem header is a one-liner

\prob@heading

We consolidate the problem header line into a separate internal macro that can be reused in various settings.

 $50 \end{fighted} 50 \end{fighted} 50 \end{fighted} 51 \end{fighted} 51 \end{fighted} 51 \end{fighted} 51 \end{fighted} 62 \end{fighted} 63 \end{fighted} 63 \end{fighted} 63 \end{fighted} 63 \end{fighted} 64 \end{fi$

With this in place, we can now define the **problem** environment. It comes in two shapes, depending on whether we are in boxed mode or not. In both cases we increment the problem number and output the points and minutes (depending) on whether the respective options are set.

problem

- 52 \newenvironment{problem}[1][]{\metasetkeys{problem}{#1}\sref@target%
- $53 \ensuremath{\verb|Contexttrue||}$ we are in a statement (for inline definitions)

```
54 \stepcounter{problem}\record@problem%
```

- 55 \def\current@section@level{\prob@problem@kw}%
- 56 \par\noindent\textbf\prob@heading\show@pts\show@min\rmfamily\noindent\ignorespaces}
- 57 {\smallskip}
- 58 \ifboxed\surroundwithmdframed{problem}\fi

\record@problem This macro records information about the problems in the *.aux file.

- 59 \def\record@problem{\protected@write\@auxout{}%
- 60 {\string\@problem{\prob@number}%
- 61 {\ifx\inclprob@pts\@empty\problem@pts\else\inclprob@pts\fi}%
- 62 {\ifx\inclprob@min\@empty\problem@min\else\inclprob@min\fi}}

\@problem

This macro acts on a problem's record in the *.aux file. It does not have any functionality here, but can be redefined elsewhere (e.g. in the assignment package).

63 \def\@problem#1#2#3{}

solution

The solution environment is similar to the problem environment, only that it is independent of the boxed mode. It also has it's own keys that we need to define first.

- 64 \srefaddidkey{soln}
- 65 \addmetakey{soln}{for}
- 66 \addmetakey{soln}{height}
- 67 \addmetakey{soln}{creators}
- 68 \addmetakey{soln}{contributors}
- 69 \addmetakey{soln}{srccite}
- \begin{macrocode} 70 **%**
- $71\,\%$ the next step is to define a helper macro that does what is needed to start a solution.
- 72 % \begin{macrocode}
- 73 \newcommand\@startsolution[1][]{\metasetkeys{soln}{#1}%
- 74 \@in@omtexttrue% we are in a statement.
- 75 \ifboxed\else\hrule\fi\smallskip\noindent{\textbf\prob@solution@kw: }\begin{small}%
- 76 \def\current@section@level{\prob@solution@kw}%
- 77 \ignorespaces}

\startsolutions

for the \startsolutions macro we use the \specialcomment macro from the comment package. Note that we use the \@startsolution macro in the start codes, that parses the optional argument.

- 78 \newcommand\startsolutions{\specialcomment{solution}{\@startsolution}}
- 79 {\ifboxed\else\hrule\medskip\fi\end{small}}%
- 80 \ifboxed\surroundwithmdframed{solution}\fi}

\stopsolutions

81 \newcommand\stopsolutions{\excludecomment{solution}}

so it only remains to start/stop solutions depending on what option was specified.

82 \ifsolutions\startsolutions\else\stopsolutions\fi

```
83 \ifexnotes
84 \newenvironment{exnote}[1][]%
85 {\bf \S hrule\smallskip\noindent\textbf{\prob@note@kw: }\small}
86 {\smallskip\hrule}

88 \excludecomment{exnote}
89 \fi%ifexnotes
90 \ifhints
91 \newenvironment{hint}[1][]%
92 \price{100} 92 {\price{100} }\
93 {\smallskip\hrule}
94 \newenvironment{exhint}[1][]%
95 {\par\smallskip\hrule\smallskip\noindent\textbf{\prob@hint@kw: }\small}
96 {\smallskip\hrule}
97 \else%ifhints
98 \excludecomment{hint}
99 \excludecomment{exhint}
100 \fi%ifhints
```

4.3Multiple Choice Blocks

```
mcb
     101 \newenvironment{mcb}
     102 {\begin{enumerate}}
     103 {\end{enumerate}}
      we define the keys for the mcc macro
     104 \srefaddidkey{mcc}
     105 \addmetakey{mcc}{feedback}
     106 \addmetakey[T] {mcc}{T}
     107 \addmetakey[F]{mcc}{F}
     108 \addmetakey [Yes] {mcc} {Ttext}
     109 \addmetakey[No]{mcc}{Ftext}
\mcc
     110 \newcommand\mcc[2][]{%
     111 \metasetkeys{mcc}{#1}%
     112 \item #2%
     113 \ifsolutions\\%
     114 \ifcsstring{mcc@T}{T}{}{\mcc@Ttext}%
     115 \ifcsstring{mcc@F}{F}{}{\mcc@Ftext}%
     116 \ifx\mcc@feedback\@empty!\else, \mcc@feedback\fi%
     117 \fi} %solutions
```

Including Problems

\includeproblem

EdN:1

The \includeproblem command is essentially a glorified \input statement, it sets some internal macros first that overwrite the local points. Importantly, it resets

 $^{^{1}\}mathrm{EdNote}$: MK: maybe import something better here from a dedicated MC package

```
118 \addmetakey{inclprob}{pts}
                           119 \addmetakey{inclprob}{min}
                           120 \addmetakey*{inclprob}{title}
                           121 \addmetakey{inclprob}{refnum}
                           122 \addmetakey{inclprob}{mhrepos}
                           123 \clear@inclprob@keys%initially
                           124 \newcommand\includeproblem[2][]{\metasetkeys{inclprob}{#1}%
                           125 \input{#2}\clear@inclprob@keys}
                             4.5
                                               Reporting Metadata
                             For messages it is OK to have them in English as the whole documentation is, and
                             we can therefore assume authors can deal with it.
                           126 \texttt{\AtEndDocument{\ifpts\message{Total: } arabic{pts} points}\fi
                           127 \ifmin\message{Total: \arabic{min} minutes}\fi}
                                      The margin pars are reader-visible, so we need to translate
